

# PECC

PROLONGED EVACUATION CASUALTY CARE

*Translating Prolonged Care Doctrine into Operational Capability*

**Prolonged care is the deliberate execution of fundamental medicine when time and distance complicate evacuation.**

PECC builds and refines that execution through structured scenarios and expert-guided instruction.

The course operationalizes prolonged casualty care guidance into structured, scenario-driven instruction for military, government, and civilian prehospital professionals.

## PECC Develops Operational Capability

- Observable performance outcomes
- Validated capability through mentored execution
- Clinical decision-making and problem solving
- Multidisciplinary team integration in complex environments

# Prolonged Evacuation Casualty Care

*Program Structure and Outcomes*

## Program Length

**Four (4) Days | Optional one (1) day specialty lab add-ons available**

PECC reinforces foundational provider competencies required for sustained casualty management in extended evacuation environments.

## Program Structure

PECC is delivered by a multidisciplinary cadre that includes Operational Providers (MD/PA), experienced SOF medics, and subject matter experts in prolonged and austere casualty care.

The program emphasizes hands-on labs, team-based execution, and high-fidelity simulation rather than lecture-driven instruction. Scenarios are pulled from real-world lessons learned.

## Pre-Course Preparation Materials

- Pre/Post Course Assessments
- Reference Materials and Recorded Lectures
- Interactive eLearning modules

## Day 1 - 3 : Didactics | Practicals | Hands-on Labs

Telemedicine and Documentation  
Critical Care Team Dynamics  
Advanced Airway Management  
Ventilator Theory and Practicals  
PFC CPG review and Practicals  
Responsible Improvisation

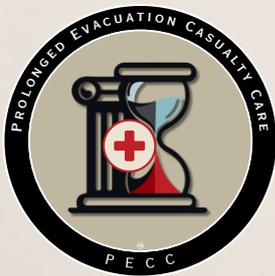

FWB/FDP Labs  
Austere Surgical Interventions  
Field Ultrasound  
Technology Updates  
Advanced Pharmacology  
Unconventional Med Planning and logistics

## Day 4 : Field Exercise

- Full mission profile requiring sustained casualty management across extended timelines with evolving operational constraints.
- Trained role players and high-fidelity simulations and patient-worn task trainers
- Team-based execution, communication, documentation, and handoff under pressure

# Prolonged Evacuation Casualty Care

## Lineage and Governance

PECC aligns with established prolonged care doctrine and is stewarded through structured advisory oversight.

### Lineage and Standards Alignment

Developed over more than a decade within the Prolonged Field Care Working Group and associated CPG development efforts, refined through hundreds of executions across global SOF, military, and civilian audiences, and formalized into the scalable, standardized PECC program.

PECC provides structured, standards-aligned prolonged care training suitable for inclusion within organizational readiness and medical sustainment programs.

- Prolonged Casualty Care training recommendations (USSOCOM 350-29)
- Joint Trauma System TCCC and PCC guidelines

The program serves as the operational bridge between established clinical practice guidelines and **executable capability** in prolonged evacuation environments.

### C-PECC Standards Committee

The C-PECC Standards Committee serves in an advisory capacity to review and refine the PECC framework, ensuring continued alignment with evolving prolonged care doctrine and operational realities.

The committee is supported by a collaborative network of affiliated practitioners who contribute field-level perspective and periodic subject matter input.

### Continuing Education and Credentialing

Awards 40+ hours continuing education

Prolonged Evacuation Casualty Care Certificate awarded upon successful completion of written and practical evaluations

## *Implementation and Organizational Integration*

### Delivery Pathways

PECC may be delivered through structured implementation models tailored to organizational requirements.

### Delivery Models

- RES-led collaboration programs
- Organization-hosted programs - RES Supported
- Strategic partner site implementation with instructional support

### Organizational Integration

PECC is designed for integration within existing readiness and medical sustainment frameworks.

The program supports organizations operating in:

- Military and special operations environments
- Conventional force medical units
- Government and interagency teams
- Rural, frontier, and disaster response systems

### Standards and Oversight

Implementation prioritizes instructional quality and standards continuity over volume delivery.

The C-PECC Standards Committee and Forum provides advisory review to ensure continued alignment with evolving prolonged care doctrine and operational realities.

### Sustainment and Continuity

PECC reinforces foundational competencies through structured repetition and guided execution.

Organizations may incorporate the framework into recurring training cycles to support long-term prolonged care capability development.

### Engagement

Organizations interested in hosting or integrating PECC into their training architecture may contact Ragged Edge Solutions for alignment and scheduling.
