

Advancing Cerebrospinal Fluid Testing for Early Alzheimer's

Exploring feasibility, demand, and access across Alberta

About the Study

Praxus Health is leading an Alberta-wide study to explore how **cerebrospinal fluid (CSF) testing** could support earlier, more accurate diagnosis of Alzheimer's disease.

We're speaking with **clinicians, patients, and caregivers** to understand:

- **The need and demand for CSF testing in real-world care**
- **How testing could be integrated into primary and community settings**
- **What supports, training, or information are needed for providers and patients**

Your input will help identify the practical steps Alberta can take to make early Alzheimer's diagnosis more accessible and equitable across the province.

Your voice can help shape the future of Alzheimer's diagnosis in Alberta

Who can Participate?

Clinicians & Care Teams

involved in cognitive assessment, diagnosis, or dementia care

Patients & Caregivers

with lived experience in assessment/diagnosis pathways

What is Involved?

Participants will take part in one, **30-minute**

interview (Zoom or phone).

- Interviews will be audio-recorded, with consent, and transcribed for analysis
- You may skip any question or withdraw at any time
- Your insights will be anonymized and used only for this study
