

Customer Well-being in Tourism

The Feel-Good-Index

Bernd F. Reitsamer, Nicola E. Stokburger-Sauer & Janina S. Kuhnle

Screver Exclusive Event, Zurich, June 2025

87% consider **well-being** a **top priority** in their lives

(McKinsey, 2024).

Among Gen-Y and Gen-Z, well-being is a **key purchasing driver**

(Kantar, 2023).

Service providers increasingly focus on well-being in their journeys

(e.g., Tikkanen et al. 2023).

- Customer well-being (CWB) is an **important outcome of service experiences** and customer journeys (Gustafsson *et al.*, 2024).
- Given the multitude of interactions in customer journeys, **single-point measurement of CWB** delivers **limited insights** (Schau and Akaka, 2021; Anderson *et al.*, 2024).
- **Digitization** offers **new measurement opportunities** → human-centered KPIs to complement overnight stays, arrivals, and revenue data.

(1) How does **CWB**, with a service experience, **develop** and change **across the customer journey**?

(2) What is the **impact** of CWB on **WOM** across the customer journey?

QUALITATIVE

Interviews with DMO-Management

- Sample**
 - 16 Expert Interviews (AT, GER, CH, ITA)
- Inhalte**
 - Status quo performance measurement
 - Use of data & digital technologies

Focus Groups with Tourists

- Sample**
 - 9 Interviews, 40 Participants
- Inhalte**
 - Motivation to provide feedback
 - Role of incentives
 - Use of digital channels

QUANTITATIVE

Multi-Season Survey

- Sample**
 - N = 1.963 (3 seasons)
- Inhalte**
 - Well-being and perception of the destination product along the customer journey.

Longitudinal Study

- Sample**
 - N = 128 (3 waves)
- Inhalte**
 - Well-being and perception of the destination product
 - CX dimensions and effectiveness of the customer journey design

Targeting via App

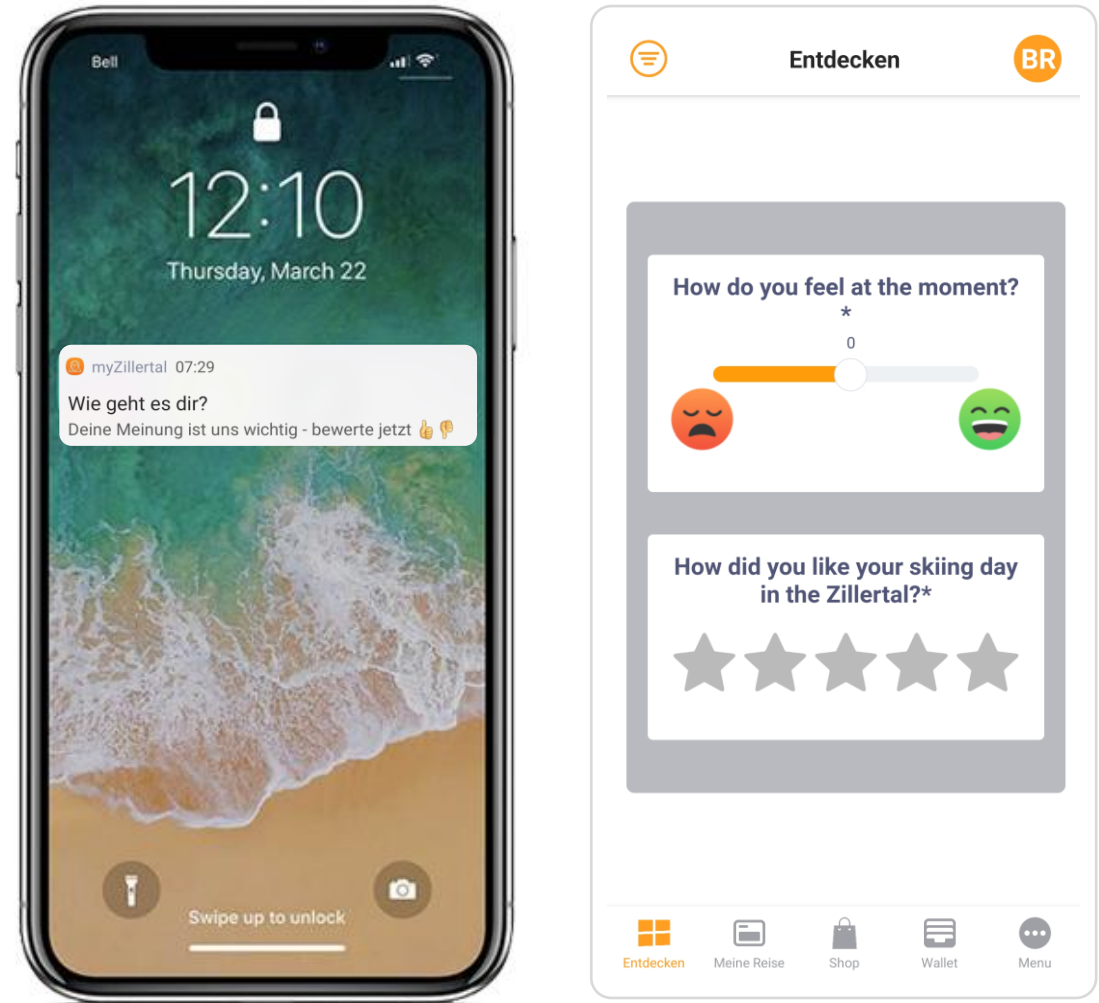

myZillertal.app users receive time-triggered surveys with their experience booking via...

- Push notification (iOS/Android – if enabled)
- Email in German / English

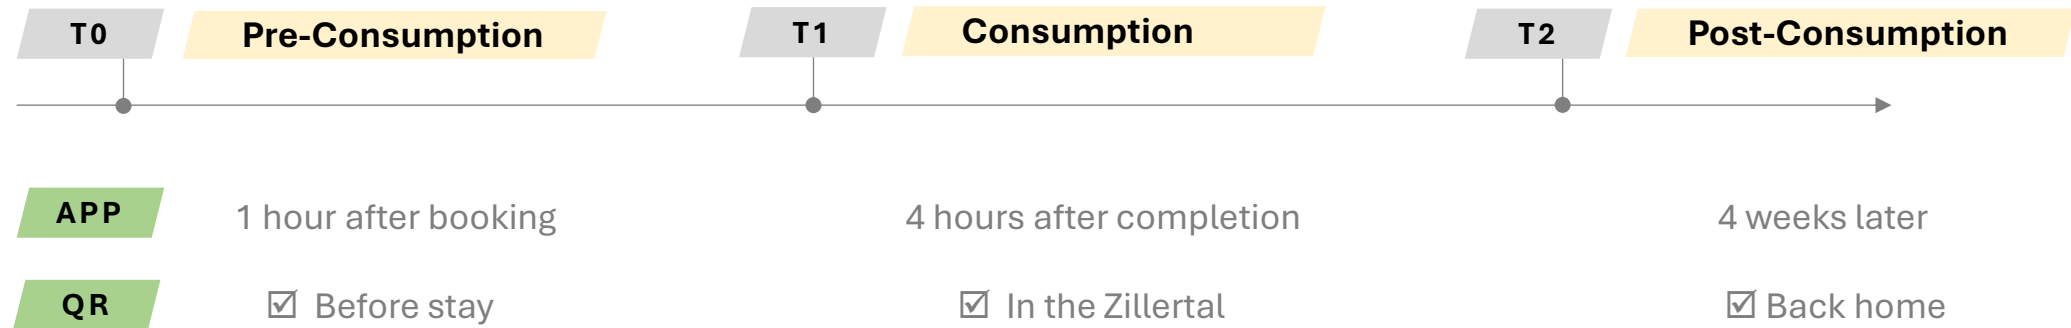

Targeting via Web and QR-Codes

Guests can self-identify their current phase in the customer journey and access the survey via...

- Web banner
- QR code
 - Display stands in the destination
 - Banners in gondolas

Waves

Design

Multi-season study (Winter 22/23; Summer 23; Winter 23/24)
Between-subjects design

Sample

M_{age} = 46.61 years

Sex = 43% female

Average stay = 8.7 days

Response Rate (App) = 1.73 %

/ Empirical Study

Measures

T1

How do you like the Zillertal?*

★★★★☆

How do you feel at the moment?*

☹️ 0 😊

Tell us why you're feeling this way right now?

Your answer...

What have you experienced?

- ☐ Skis & board
- ☐ Outdoor activities
- ☐ Wellness
- ☐ Culinary
- ☐ Party
- ☐ Events

How long are you staying in the Zillertal?

Days

When are you in the Zillertal?

Select an option

How likely are you to recommend the Zillertal to a friend or colleague?*

0 1 2 3 4 5 6 7 8 9 10

Not likely at all Extremely likely

It is likely that I will visit the Zillertal again.*

Fully disagree 1 Fully agree

/ Feel-Good-Index (FGI)

$$\begin{array}{ccc}
 \text{T0} & \text{T1} & \text{T2} \\
 \left[\left(\frac{(ASZ_0+50) * PF_0}{100} - \frac{PF_0}{5} \right) + \left(\frac{(ASZ_1+50) * PF_1}{100} - \frac{PF_1}{5} \right) + \left(\frac{(ASZ_0+50) * PF_0}{100} - \frac{PF_0}{5} \right) \right] * 100
 \end{array}$$

M1 WINTER 22/23

87,90

M2 SUMMER 23

91,29

M3 WINTER 23/24

86,12

Note:

PF = Performance Zillertal „How do you like the Zillertal?“

ASZ = Affective Slider Zillertal „How do you feel at the moment?“ (T1) / „How do you feel, when you think about your stay in the Zillertal?“ (T0 / T2)

/ Results – FGI

- **Pre- and Post-CWB** significantly **better than on-site** ($F(2;1751) = 65.59$; $p < .001$)
- Seasonal differences
- **Winter:**
 - More pronounced U-shape
- **Summer:**
 - Flatter U-shape
 - CWB on-site is significantly better than in winter ($\Delta +8.5\%$)

/ Results

Multiple answers!

Note: Data from Main Studies 1 and 3

- **FGI** with activities during **pre-/post** stages is **more positive** than **on-site**.
- **T1: Party, outdoor, and culinary activities** generate the **highest FGI** scores **on-site** – skiing / snowboarding and events fall short.
- **Parties** lead to the **best retrospective FGI**.

/ Results

Note: Data from Main Study 2

- **On-site FGI:** **positive trend** towards the end of the season.
- **August and September, on-site FGI** is able to **keep up with T0 and T2**.
- Smaller differences between post-visit retrospection and on-site FGI.

/ Results

Note: Gen Z = 1996 – 2010; Gen Y = 1980 – 1995; Gen X = 1965 – 1979; BB = 1946 – 1964

- **FGI lowest on-site** across all generations
- Biggest "drop" in T1 among Gen-X and Gen-Z
- **BUT: Gen-Z** has the **strongest pro- and retrospection** moment of all
- Expectation-Performance Gap (T0 – T1) lowest for Gen-Y
- **Boomers** show second-best CWB in T0, "**benefit**" the **least** from vacation in T2

/ Results

TIME	DV	IV	Main Study 1 Winter 22/23	Main Study 2 Summer 23	Main Study 3 Winter 23/24	Σ 3 Studies	Σ WINTER	Σ SUMMER
T0	WOM	T0_FGI	.640**	.440**	.503**	.546**	.561**	.416**
T1	WOM	T1_FGI	.431**	.560**	.531**	.525**	.511**	.560**
		T1_CROWDING	-.074	-.092	.014	-.044	-.029	-.092
		T1_RAINH	-.004		-.025	-.062	-.009	
		T1_SUNH	-.035	-.122	-.114	-.003	-.026	-.122
		T1_TEMP	.037	.150	-.044	-.052	-.069	.150
		T1_SNOW	-.048		.020		-.001	
		T1_RAIN		-.044		.084°		-.044
T2	WOM	T2_FGI	.629**	.536**	.444**	.570**	.585**	.546**

Linear Regressions with SPSS 28

Table contains standardized regression coefficients

Significance levels: ** = $p < .001$; * = $p < .05$; ° = $p < .1$

Note: WOM = Word-of-mouth; T0_CWB = Customer well-being in T0 (setting-specific); T1_CWB = Customer well-being in T1; T1_CROWDING = Number of customers initially accessing the ski resort through a lift gate or turnstile per day; T1_RAINH = Precipitation per day; T1_SUNH = Sunshine hours per day; T1_TEMP = Average temperature per day; T1_SNOW = Average snow height per day; T1_RAIN = Precipitation duration per day; T2_CWB = Customer well-being in T2 (setting-specific); MFQ = Memory Frequency

- FGI is in **all stages** and **all studies** a strong **driver of WOM**.
- **Overall:** light **U-shape** tendency, more pronounced in winter
- **Summer:** **inverted U-shape**, on-site CWB performs best
- **Crowding** and **weather** have **no significant impact** on **WOM**.

Findings

- **FGI** as a **new KPI** to **evaluate service experiences along the customer journey**
- **‘U-shape’** → Pre- and post-phases show significantly higher FGI scores than the on-site
- **Differences** between **seasons, months, and activities**
- FGI as a **strong driver of WOM**
- **Weather** and **crowding** play a **minor role** in WOM intentions

Implications | Theory

- Extension of previous research on **discrepancies in temporal perception of CWB**.
- Static measures of CWB fall short – use dynamic, longitudinal tracking
- Pictorial scales and **short** digital surveys work well for this purpose

Implications | Practice

- **‘U-shape’** → **identify causes for low on-site FGI**, improve to create a favorable basis for post-core FGI.
- **Tailor customer journey design to seasonal and contextual factors** affecting FGI → The **magic** is in **personalization!**
- **Continuous FGI monitoring** to refine service delivery and boost loyalty outcomes.

/ Thank you.
