

Natural Supplements. Healthier Livestock.

StockHealth has been supplying Australian farmers, breeders and trainers for over 30 years. Our natural supplement range is built around three products, **Double Strength Apple Cider Vinegar**, **Double Strength Apple Cider Vinegar with Garlic** and **MegaTrace**.

Designed to work with your animals' own systems supporting digestion, correcting mineral gaps and building resilience from the inside out. Practical, affordable and proven across equine, dairy, beef, sheep and poultry operations nationwide.

MegaTrace

A chelated, sea-based trace mineral supplement in bioavailable liquid form. Rapidly absorbed by livestock to correct mineral deficiencies, maximise growth potential and sustain production performance

WHAT IT DOES

MegaTrace is a unique formulation of high-quality, organic, sea-based minerals in a chelated, bioavailable liquid form that is easily assimilated and absorbed by livestock. Unlike standard inorganic supplements, **MegaTrace's** chelated formula means minerals are genuinely taken up by the animal and quickly utilised to address deficiencies and sustain output. It can be administered via feed, water or drench.

KEY BENEFITS

- Chelated formula for high bioavailability, minerals are absorbed and used, not passed through
- Addresses mineral deficiencies that affect growth, reproduction, immunity and coat condition
- Completely balanced mineral package, easy to administer in feed, water or as a drench
- Maximises growth potential and optimises production and performance levels
- Safe for regular use across all livestock categories

WHEN TO ADMINISTER

Smaller, regular doses are more effective than large infrequent megadoses or drenches. During periods of poor feed quality or increased stress, increase the frequency of **MegaTrace** in water, feed or drenches. Your animals will be healthier, happier and more productive.

Double Strength Apple Cider

The only double-strength **ACV** on the market made from whole apples, 100% natural, unpasteurised and retaining the mother of vinegar for optimum absorption.

WHAT IT DOES

StockHealth Apple Cider Vinegar supports your animals with vital pH acid/alkaline balance, reducing vulnerability to illness and supporting gut health, immunity and general condition. Packed with vitamins, minerals and trace elements, it is quickly assimilated into the digestive system.

KEY BENEFITS

- Maintains animals' vital pH acid/alkaline balance, reducing vulnerability to illness
- High in natural acids
- Rich source of potassium. Builds strength, flushes out toxins and fights bacteria
- Unpasteurised, organic and quickly assimilated into the digestive system
- Beneficial for a variety of stock and farm animals
- Can be used externally as a cleaner and gentle disinfectant

HOW TO USE

- Add to drinking water
- Add to meal or silage
- Spray onto animals' coats
- Direct drenching, must be diluted 50/50 with water

Double Strength Apple Cider Vinegar with Garlic

All the benefits of **Double Strength Apple Cider Vinegar** with the added antibiotic properties of garlic. A powerful natural tonic to keep farm and stock animals in optimal health.

WHAT IT DOES

Stockhealth's Apple Cider Vinegar with Garlic combines the gut health and pH balancing benefits of **ACV** with garlic's natural antibiotic properties. Together, they help keep disease and bacteria at bay, support immunity, and maintain animals in peak condition. Can also be used externally as a fly and tick deterrent, dilute with water and spray onto animals' coats.

KEY BENEFITS

- Natural antibiotic properties of garlic help keep disease and bacteria at bay
- Maintains animals' vital pH acid/alkaline balance, reducing vulnerability to illness
- High in natural acids
- Rich source of potassium - builds strength, flushes out toxins and fights bacteria
- Unpasteurised, organic and quickly assimilated into the digestive system
- Beneficial for a variety of stock and farm animals
- Can be used externally as a cleaner and gentle disinfectant
- Acts as a natural fly and tick deterrent when diluted and sprayed onto coats
