ECOTIME

Tapping into unused resources

LET'S CHANGE WATER MANAGEMENT

FOR A MORE
SUSTAINABLE
FUTURE

OUR COMMITMENT

Ecotime's mission is to design innovative systems and to encourage the society to optimize the circular economy management of our natural resources.

WATER RECYLCING AND ITS BENEFITS

Water recycling reduces a building's water footprint.

Whether you are a designer, developer, builder, public official, or user, water-saving systems will offer you numerous advantages:

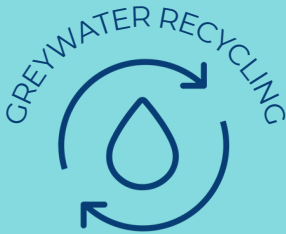

- 1 Save drinking water and preserve freshwater sources.
- 2 Support sustainable development efforts and achieve certifications.
- 3 Reduce the volume of water in infrastructures.
- 4 Generate savings in cases of volume-based taxation.

OASIS

Oasis is a fully automated, all-in-one rainfall harvesting system that allows for better stormwater management and reduces overall drinking water consumption.

HYDRALOOP

Hydraloop is an all-in-one greywater recycling system that recovers wastewater for reuse where drinking water is not required.

Ecotime is a partner of Hydraloop.
