

RAISED RIB BELTS SET THE STANDARD FOR PASTEURIZING

Intralox Series 400 and 1900 Raised Rib belts are specially designed to withstand pasteurizers' high heat and intense conditions. Raised Rib belts feature thicker modules and larger rods to increase durability, reduce back tension, and extend belt life. Combined with finger transfer plates, these belts eliminate product transfer and tipping problems for cans, one-way glass bottles, returnable glass bottles, and other pasteurized items.

Raised Rib belt benefits:

- **Belt life of 10 years or more**
- **Enhanced flexibility in equipment sizing, layout, and design**
- **Reduced life cycle costs**

10+

**YEARS OF EXPECTED
BELT LIFE FOR INTRALOX
PASTEURIZER BELTS**
