

# From data chaos to business value

AI-powered data management for SAP S/4HANA — purpose-built to help enterprises get clean data, keep it clean, and migrate with confidence.

## THE CHALLENGE

### Poor data quality is the silent killer of S/4HANA ROI

Most SAP implementations fail to deliver expected value — not because of the technology, but because of the data going into it. Dirty master data corrupts reporting, blocks AI use cases and forces costly rework.

- AI-powered features in S/4HANA only work with clean, trusted master data
- Data migration without validation leads to expensive post-go-live issues
- Without governance, data quality degrades within months of go-live

## THE VUPICO DAP SOLUTION

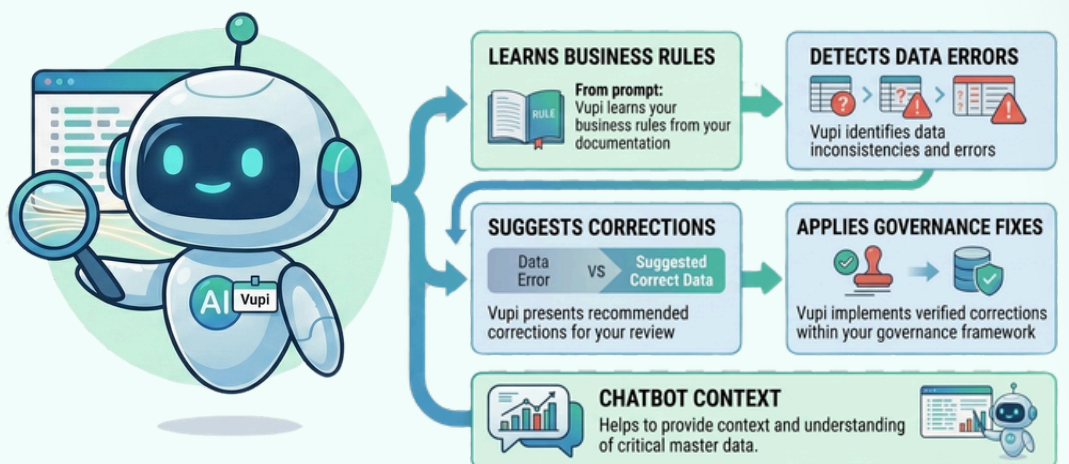

### Your complete data journey, accelerated

## Meet VUPI – Your AI Data Agent

Unlike traditional data management that traps teams in reactive firefighting, Vupi acts as a proactive AI partner. It autonomously learns your business rules directly from your documentation to detect errors and enforce governance right at the point of entry.

By automating validation from migration onwards, Vupi keeps your S/4HANA data clean—empowering your team to drive real business value instead of cleaning up data chaos.

## DAP PLATFORM CAPABILITIES

### Everything you need, fully integrated

DAP brings data governance, data quality, master data management and data migration together in one AI-enabled cloud solution — no stitching together point solutions.

<p><b>Data Governance</b> Policy-driven approval workflows for all data changes and new master data records. Full audit trail.</p>	<p><b>Data Quality</b> AI rule library auto-generated from your documentation. Vupi detects and fixes errors at scale.</p>
<p><b>Master Data Management</b> Centralised MDM with validation at point of entry for Materials, Customers, Vendors and more.</p>	<p><b>Data Migration</b> Pre-built object templates, AI- data transformation support, pre-load and post-load validation.</p>

Ready to accelerate your data journey?
