Scape

Overview

Scape offers a flexible and versatile option in the modular seating arena. It is constructed with durability and offers the Source lifetime structural warranty.

A few planning and construction notes to be aware of:

The textured metal frame detail is consistent throughout the product line and adds interesting lines from all sides.

The weight capacity for each seat is 400lbs.

The back angles of the low back and high back are different. Please consider this when specifying the low and high units on the same project.

Arms are straight end panels while the backs have angles. When making 90 degree turns, please be sure to specify the transition corner pieces.

Scape offers felt glides to be used on hard surface floors. Please note that Scape does not offer leveling glides.

Upholstery

Upholstery details for the Scape product should be carefully considered.

Please review fiber content and stretch when selecting textiles.

Some fabrics will have a tendency to stretch and puddle more than others.

Fabrics with stiff backing can cause wrinkles on curved units.

Pattern Matching—Our standard upholstery application is using the material off the bolt. Stripes and geometrics will be upholstered with the best finished product in mind. For pattern matching, please contact customer service for yardage requirements.

Please contact customer service with specific layouts and fabric selections to confirm the textile is appropriate for the application. Our graded in program is for convenience only and does not mean that each fabric has been pre-approved for each chair.

Memo samples for approval can be sent to:

Sutton, MA 01590

Worksurface Details

Scape high back units have been designed to accept worksurfaces that can be used as secondary work areas.

The overall back height of all high back units is 43". Predrilled metal inserts have been set inside the back panel of these high back units so that when the worksurface is installed, the height of the worksurface is 42".

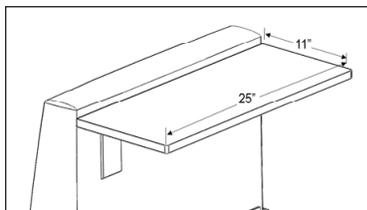

Templates are sent with each worksurface so that installers can easily locate placement for the supporting bracket. (See illustration below)

Each worksurface is 1" shorter than the seating width. Please plan accordingly. Special quotes are available for edge to edge worksurfaces.

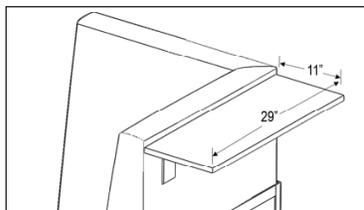

Worksurfaces are square to the back of the seat with a .50" radius edge on the user side. They are .75" thick.

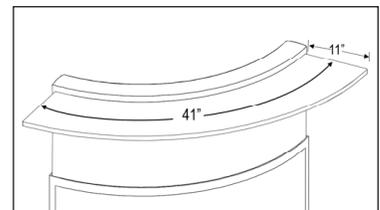

WKS25
To be used with
Center Section Unit High Back
5521HB

WKS29
To be used with
Left or Right Hand End Unit High Back
5522HB or 5523HB

Power

Power units are available on Scape seating units with the exception of the quarter round ottoman, quarter round outside corner and quarter round outside corner high back. Power can be installed on the front, left or right side of the unit as you sit in it. (See illustrations for reference) Power units will be finished to match the frame color.

Each Power unit will have 2 Power, 2 2.1 AMP USB and a 108" Power Cord in Black.
2.00" x 5.25"

12A, 120 VAC Spill Resistant receptacles

USB charging ports that work with USB compatible devices

USB Ratings: 2.1A, 11 watts, 5V/DC

Integral circuit breaker protection

All metal construction

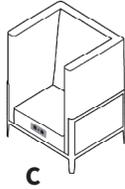

Rugged powder coat, and aluminum anodize finishes for lasting durability
