

This sedimentary limestone comes from the deposits found in the northern heights of morocco.

The Driftwood Limestone, both indoors and outdoors, seduces with its raw appearance with a nuanced shade of grey giving reference to natural concrete. Its multiple finishes and textures highlight a refined, contemporary or industrial atmosphere. Adorned with waves or clouds depending on whether it is worked in vein cut or cross cut, the driftwood fits perfectly into an environment by adapting to the desired atmosphere while imposing itself as a neutral actor in any type of environment and space by promoting harmony.

Stone Colour Grey
