

COPING PROFILE · 01

Natural & Tumbled Edge

Tumbled on all six sides, the natural-edge coping wears a soft, weathered profile — organic and aged, as though the stone has bordered the water for years.

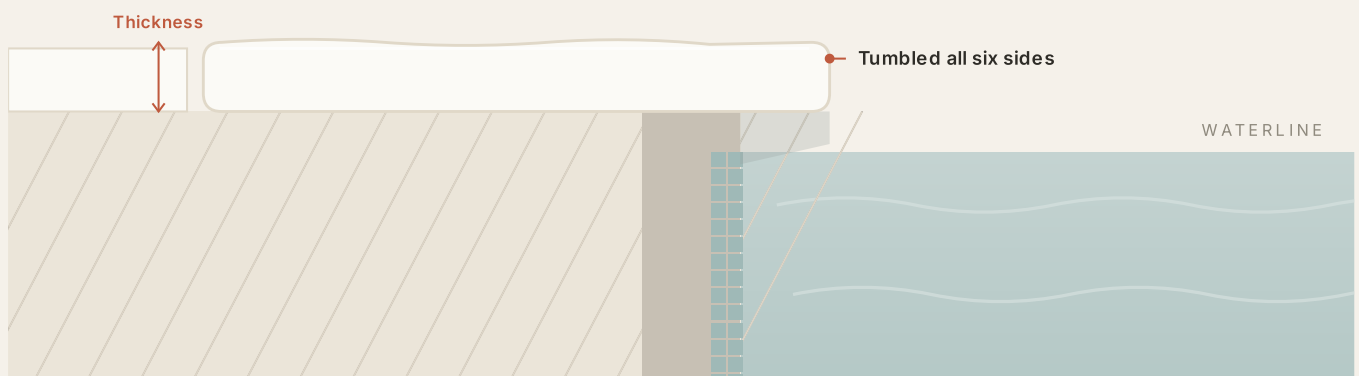

It's the natural companion to any tile finished with a tumbled edge: the rounded, slightly irregular arris carries the same hand-worn character right up to the water's edge, so deck and coping read as one continuous surface.

Edge character varies naturally from piece to piece — dry-lay and blend before fixing for the most even, organic result.

PROFILE AT A GLANCE

DETAIL

FINISH	Tumbled, all six sides
EDGE	Soft · organic · aged
PAIRS WITH	Tumbled-edge tiles
BEST FOR	A relaxed, timeworn look

Section — softened arris on every edge, cantilevered over the waterline.

COPING PROFILE · 02

Pencil Rounded Edge

A machined half-round to one long edge. The gentle radius removes sharp arrises — softening the coping underhand and underfoot while reducing the chance of chipping.

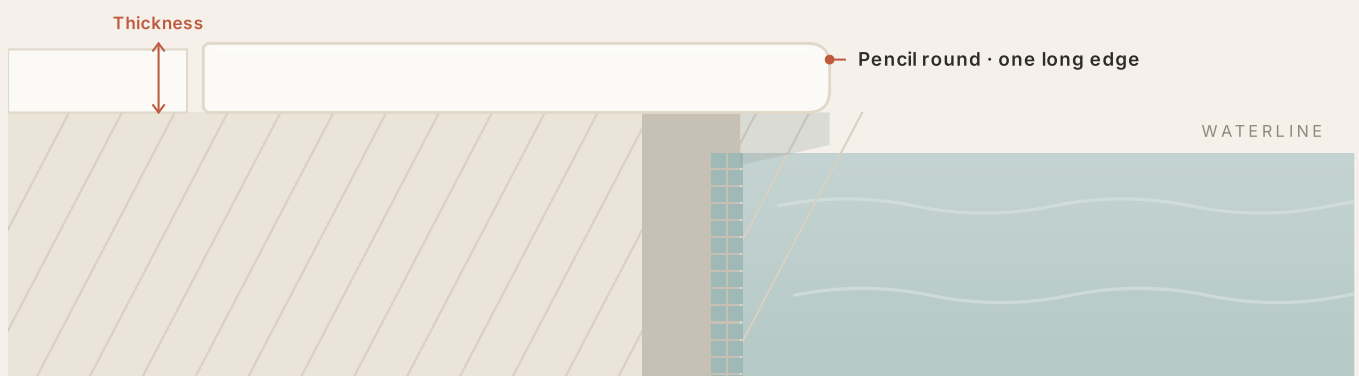

Available on selected products, the pencil round is a quiet, precise detail. Rounded on both the top and bottom of one long side, it reads as a clean, contemporary edge and lifts both the appearance and the safety of the pool surround.

Pencil rounding is available on certain products only — confirm the profile for your chosen stone when specifying.

PROFILE AT A GLANCE

DETAIL

FINISH	Machined
EDGE	Pencil round · one long side
AVAILABILITY	Selected products
BEST FOR	Safety + a refined edge

Section — top and bottom arris eased to a pencil round, flat face between.

COPING PROFILE · 03

Bullnose Coping

A full convex radius machined along one long edge. The rounded profile is smooth underhand and underfoot and — with no sharp arris to catch — noticeably more resistant to chipping.

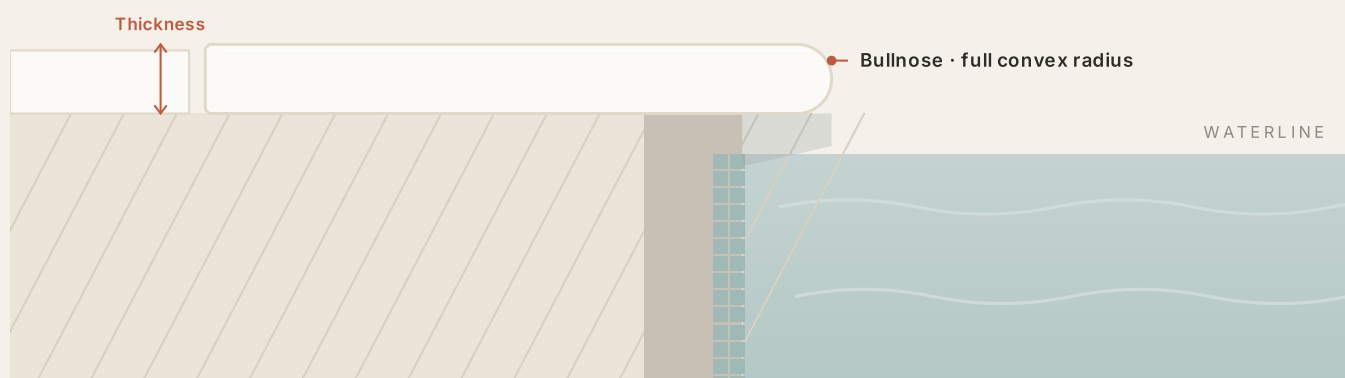

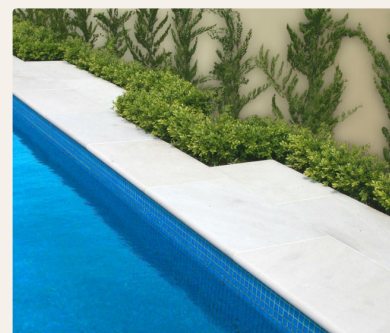

Where the pencil round eases only the top and bottom of the edge, the bullnose carries a single continuous curve across the whole front face. It reads as a soft, generous edge and wears well — a durable, safe choice for pool surrounds and step treads alike.

Bullnose is machined on selected products — confirm the profile and radius available for your chosen stone.

PROFILE AT A GLANCE

DETAIL

FINISH	Machined
EDGE	Full convex radius · one long side
BENEFIT	Durable · chip-resistant
BEST FOR	A soft, rounded edge

Section — a single convex radius across the full front edge.

COPING PROFILE · 04

Rebated & Drop-Down

Cut from a solid block to read as a thick slab while staying as slim as 20–30 mm. The rebated face drops over the pool beam to throw a crisp shadowline down the water's edge.

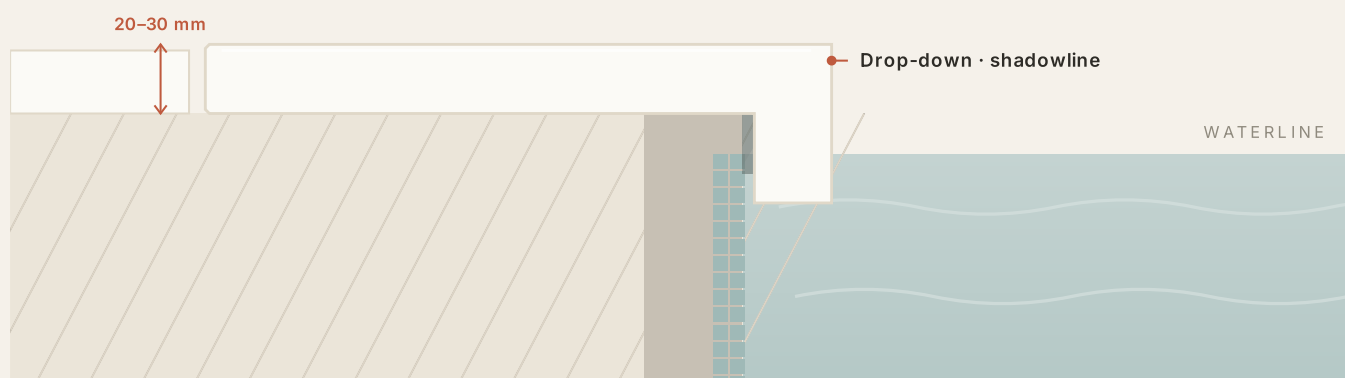

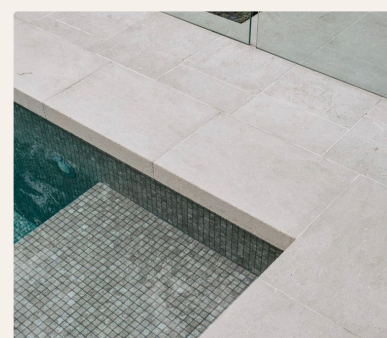

The drop-down profile sits over the pool beam and returns down the internal face of the pool or step, concealing the beam and casting a shadowline that adds depth and weight. A refined option for fibreglass and concrete pools, and equally at home on stair treads.

Thickness and drop are cut to suit the product and beam — share your pool detail so we can match the profile.

PROFILE AT A GLANCE

DETAIL

THICKNESS	20 / 30 mm (by product)
PROFILE	Rebated · drop-down
SUITS	Fibreglass · concrete · treads
BEST FOR	A substantial edge + shadowline

Section — solid-block coping returning over the beam to form the shadowline.
