Stop Managing Access Control Problems. Start Mastering Them.

The Only Reader That Transforms Your Business, Not Just Your Doors

Are you tired of dealing with insecure credentials, and explaining to auditors why your access control is a security risk?

The APEX Reader transforms access control from a constant headache into a strategic advantage. When you achieve The APEX Effect, you eliminate the cycle of replacement and reinvestment.

AX-20
Single Gang

Why Security Directors Choose the APEX Reader Platform

Immediate Security Upgrade
EAL 6+ crypto module and patented Prox Filter secure existing cards instantly while you plan your complete transition

Zero-Disruption Migration
Patented OSDP Auto-Detect upgrades you to modern security protocols without rewiring or downtime

Protected Investment
LEAF Community integration, next-gen NFC chipset, and vendor-neutral design protect your investment for decades

Simple but Brilliant Installation
An access control reader installation as easy as possible, reducing labor to keep your budget in line.

Your Current Reality vs. The APEX Effect

Current Reality	→	APEX Effect
Managing 5-10 different card formats	→	One secure credential that works everywhere
Vulnerable employee cards easily cloned with $20 tools	→	Advanced encryption protects against all threats
Employees with multiple cards for doors, parking, lockers, etc.	→	Single card for all access needs
Vendor lock-in limiting future flexibility	→	Credential freedom with any manufacturer
Impossible choice: "keep it limping or replace it all"	→	Seamless transition strategy with backwards compatibility

Solve Your Biggest Security Headaches with our Transition Toolbox

Seamless OSDP Migration

Skip the expensive rewiring. APEX Reader's patented OSDP auto-detect technology lets you upgrade from Wiegand to OSDP using your existing infrastructure—protecting your installation investment while gaining modern security.

Credential Freedom

Maintain complete control with LEAF credentials and true vendor neutrality. Your investment works across multiple manufacturers' systems—your choice, your timeline, your future partners.

Mobile Credential Transition

Clear upgrade path from legacy cards to mobile credentials with hybrid deployment support. Next-gen NFC chipset handles current Prox cards and future mobile technologies without compromise.

Prox Filter

Ensures ONLY the smart, secure side of a dual-tech credential is read on new Wavelynx readers. Transition at your own pace without the hassle of re-configuring readers later. Immediately secure your facility upon the initial install.
