# REVEFI

AI Agent for Data Spend Optimization

- Reduce data platform spend by up to 60%
- Get results in 5 minutes
- Gain 10x boost in operational efficiency

Get AI-powered insights into financial governance, budgeting, cost allocation, and forecasting to empower finance and data teams with a unified view of data spend.

Optimize data observability, and engineering workflows with autonomous data quality checks, lineage mapping, and actionable insights.

Maximize the efficiency of your data platforms with AI-driven optimization that reduces query run times, resolves performance bottlenecks, and cuts resource costs.

Automated FinOps

Automated Data Observability

Automated Performance Optimization

AI Agent

Automated Usage & Insights

Automated DataOps

Understand data platform usage with deep insights into inefficiencies, underutilized resources, and consumption trends.

AI-powered automation streamlines data operations by reducing manual effort, accelerating data delivery, and lowering operational overheads.

Self-Tuning

- Adapts to data workloads and usage patterns to optimize costs.
- Fine-tunes resources and queries for maximum data value.
- Detects inefficiencies and recommends targeted cost-saving actions.

Self-Driving

- Automates complex cost optimization tasks, without manual effort.
- Operate your platform at peak cost efficiency without human intervention.
- Proactive, autonomous process that continuously drives down spend.

Agentic AI

- A dedicated autonomous agent that constantly assesses your cloud data warehouse environments.
- Get actionable insights, and intelligent recommendations for better cost savings.
- Self-learning, and anticipates future costs to suggest preventative measures.

Zero-Touch

- Quick setup; integrates with existing data platforms in minutes.
- No impact on current workflows or performance.
- Delivers instant value and ongoing savings with minimal effort.

StanleyBlack&Decker

Is saving on **Snowflake Spend** and has automated Data Quality and Performance Optimization.

Cribl

"**Revefi is the Apple of data observability**

no training needed to onboard new team members. Other tools are built like Android, with too many settings and configurations."

AMD

Use Case: **Spend Optimization**

Data Warehouse: **Snowflake**

Verisk

Multiple businesses at Verisk have successfully integrated Revefi into its operations, achieving significant spend optimization and data observability.

- **Cost Savings**: Achieved warehouse cost reductions of up to 60% savings.
- **Spend Optimization**: Projected annualized ROI exceeding 100%.
- **Automated Data Observability**: Deployed over 665,000 monitors that comprehensively tracked data freshness, schema changes, and query performance.
- **Operational Efficiency**: Automated, zero-touch approach and integrated notifications minimized manual oversight and accelerated response times.
