DECISION FOCUS INTELLIGENCE

SOLUTION BRIEF

Decision Focus Intelligence

The intelligence layer that reads your data, works to your rules, and stays inside your platform

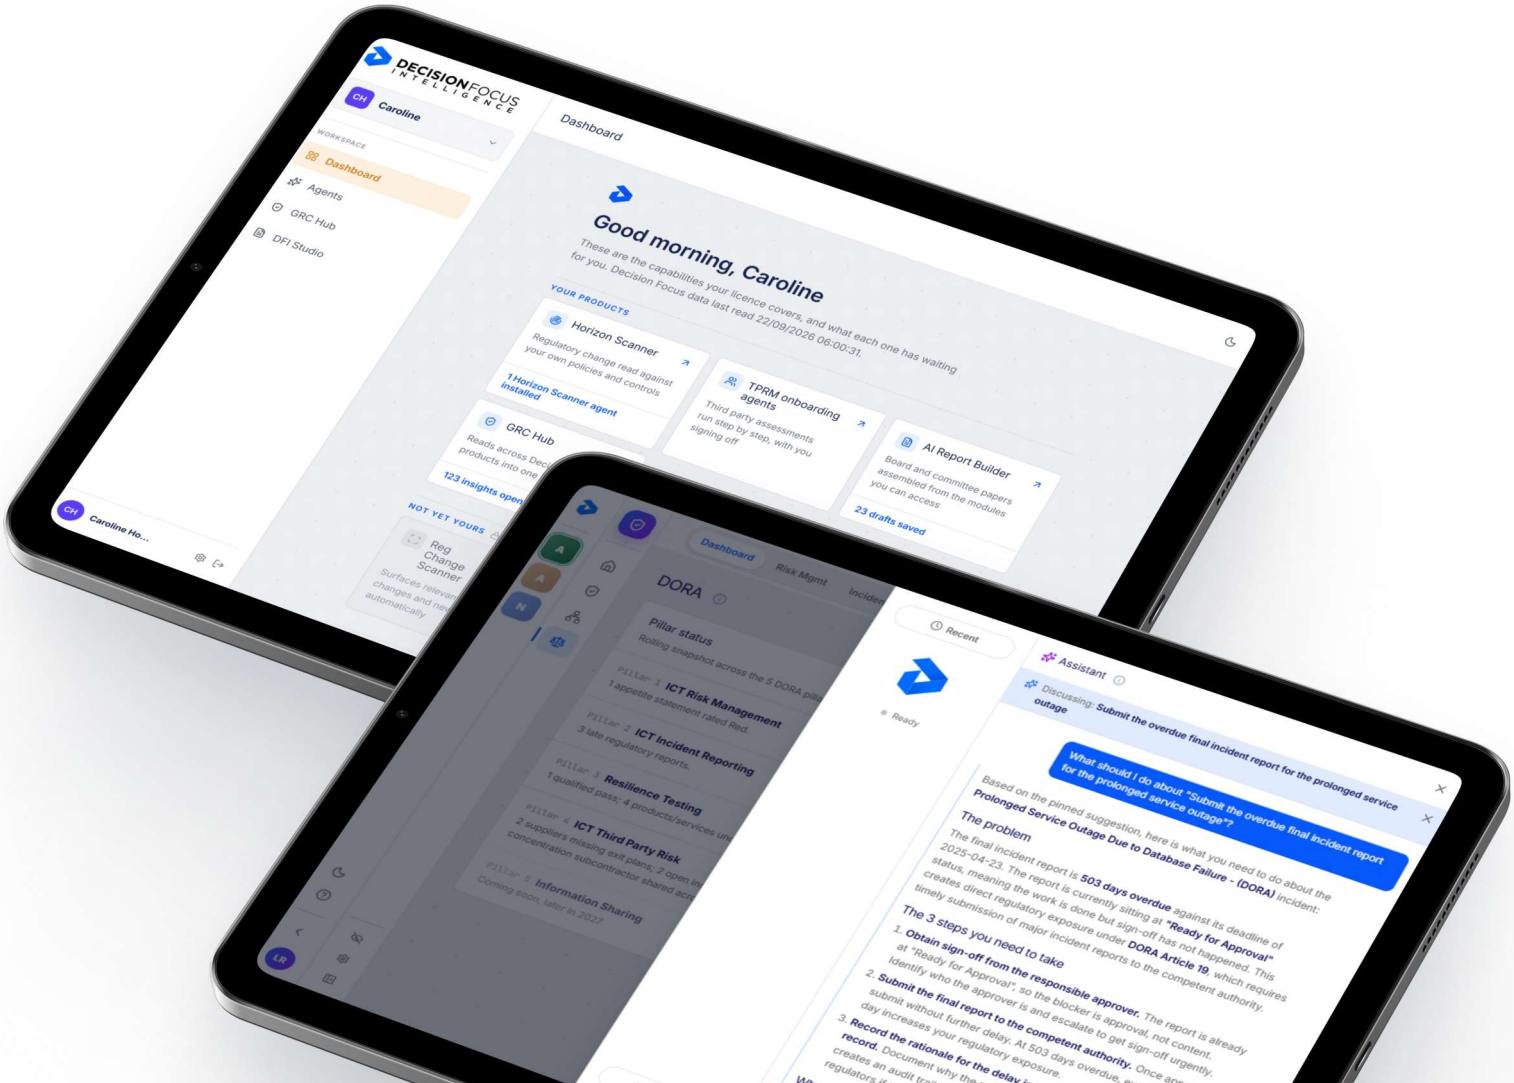

DECISIONFOCUS

Introducing Decision Focus Intelligence

GRC teams have never had more work asked of them. Regulatory change keeps accelerating, third-party portfolios keep growing, and board questions cut across your whole GRC stack. Through all of it, your team is still doing the joins by hand.

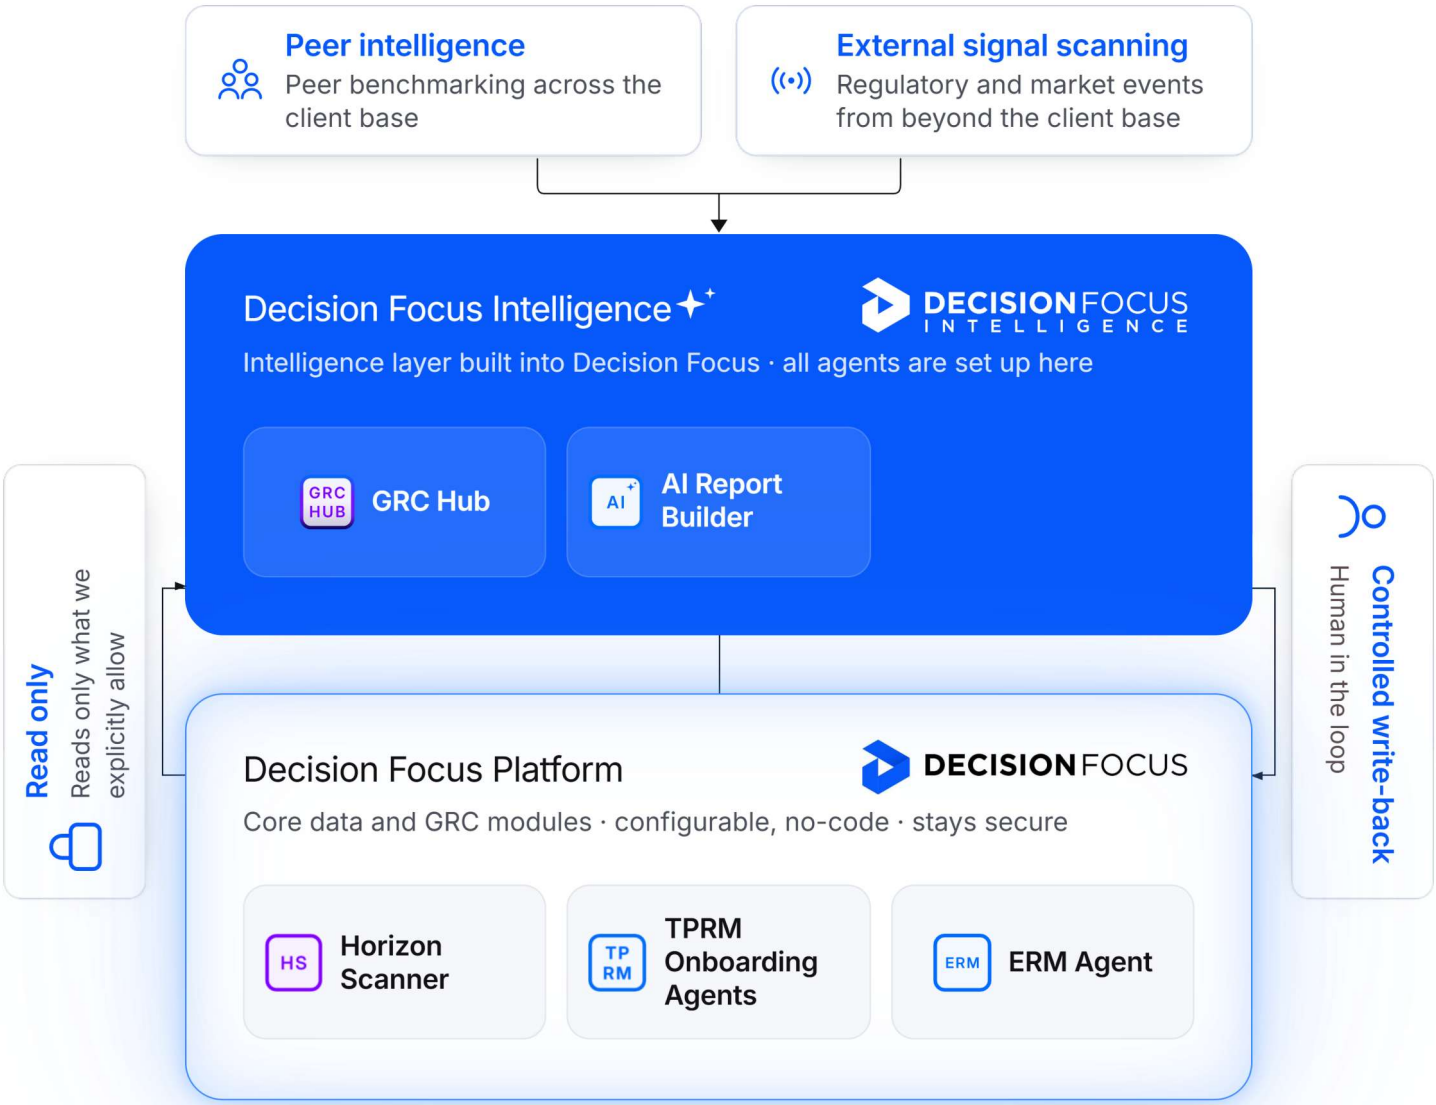

Decision Focus Intelligence is our answer. An intelligence layer built on top of the Decision Focus platform: it reads your live data, reasons from your policies, and only writes back when you approve. Every insight is traceable to a real record, and every action is captured in the audit trail.

HOW IT FITS TOGETHER

Intelligence, built into the platform

The intelligence layer sits on top of the Decision Focus platform, not beside it. It reads only what you permit, writes back only when a person approves, and every agent lives inside the platform your teams already use.

THE 3 DIMENSIONS

External, connected, focused

Each dimension answers a different question. Because they all sit on your live Decision Focus data, value compounds when they are used together.

Decision Focus Intelligence works in 3 ways. It watches outside, bringing in regulatory and external change before you have to go looking for it. It connects, giving you one view across the modules you already run. And it goes focused, working deep inside a single process to take the manual effort out of it.

EXTERNAL

Watching outside

Horizon Scanner

An AI agent watches your potential regulatory sources continuously, surfaces only the changes that affect you, and drops ready-to-action insights straight into Decision Focus.

CONNECTED

Seeing across modules

GRC Hub

Reads your live data across your Decision Focus modules and frames it through the different lenses that different stakeholders need.

FOCUSED

Going deep inside one process

TPRM Onboarding Agents

4 AI agents work through the routine steps of third-party onboarding end to end, while your analysts stay accountable for every decision that matters.

More capabilities join the same layer as they mature, including the AI Report Builder, currently in limited release, and the ERM Agent, coming soon.

Build your perfect GRC solution
Your needs, your choice

Combine Decision Focus Intelligence with ERM, Operational Resilience, TPRM, ISMS, Compliance Monitoring & Internal Audit and others to deliver integrated assurance across your organisation with our 'Total GRC' approach.

Our agile no-code platform adapts to your frameworks and processes, and these can then be mapped via configuration to Decision Focus Intelligence capabilities, ensuring it reads the right data.

One unified platform

AI | with integrated AI enhancement

Risk

- ERM — Enterprise Risk Management
- Op Res — Operational Resilience
- TP RM — Third-party Risk Management
- IS MS — Information Security Management System
- MRM — Model Risk Management
- DO RA — Digital Operational Resilience Act
- RM IS — Risk Management Information System
- AI GOV — AI Governance

Compliance

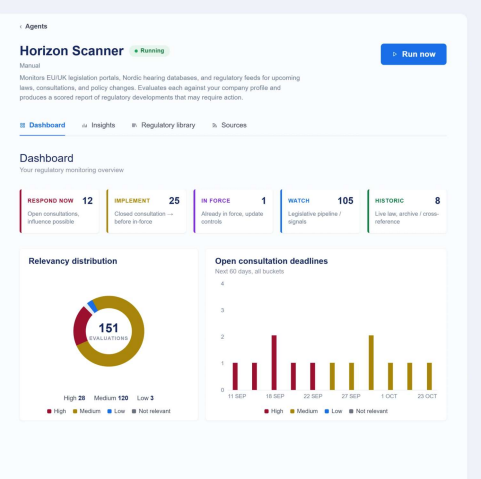

- PM — Policy Management
- DP — Data Privacy
- HS — Horizon Scanning
- RCM — Regulatory Change Management
- COM — Compliance Monitoring
- RR — Regulatory Reporting
- CM — Complaints Management
- CI — Conflicts of Interest
- GH — Gifts & Hospitality
- PG — Product Governance
- SM CR — Senior Managers & Certification Regime

Audit

- IA — Internal Audit
- AS — Audit Survey
- SOX — Sarbanes-Oxley Act
- QA — Quality Assurance

EXTERNAL | WATCHING OUTSIDE

The scanning and interpreting, already done for you.

HORIZON SCANNER

COMING SOON: REGULATORY CHANGE SCANNER

Regulatory change is relentless, and most compliance teams are still scanning regulator websites by hand, then working out which of their policies, risks and controls each change actually touches.

Horizon Scanner does that work for you. An AI agent watches your regulatory sources continuously, surfaces only what matters to your organisation, and drops ready-to-action insights straight into Decision Focus. We do not just monitor regulation. We connect it to your world.

Ranked by impact

Only the changes that affect you, ranked by impact

Mapped to your world

Suggested actions mapped to your policies, risks and controls

European coverage

Coverage of EU-level, UK and Danish national sources, with sources added continuously

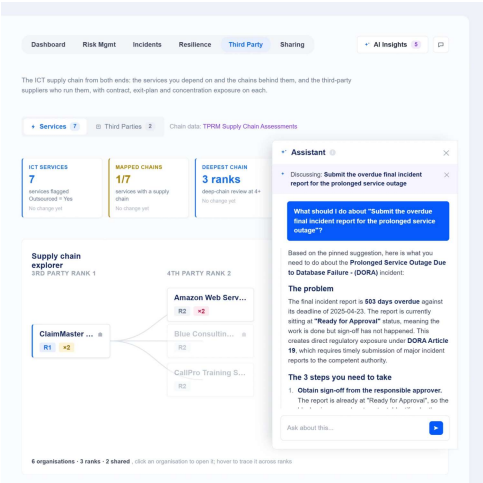

Audit-ready by default

Every AI-suggested item and human edit captured automatically

CONNECTED I SEEING ACROSS MODULES

One source of truth. Every lens that matters.

GRC HUB

Every leader in a GRC function is asking questions that cut across the whole business. Are the risks that keep me up at night actually being looked at? Are we DORA-ready, and can I defend it to a regulator? If this supplier fails, what breaks? The data already lives in Decision Focus and is joined up between modules. GRC Hub reads your data across your modules, holds it as one source of truth, and frames it through a cross-module lens each stakeholder needs. Same data, different lens, one answer that stands up in front of a regulator.

Two lenses

Two lenses today, Integrated Assurance and DORA, with many more on the way

One AI companion

One AI companion that ranks what matters and drafts what you need

Explainable insights

Explainable insights with full drill-down to source records

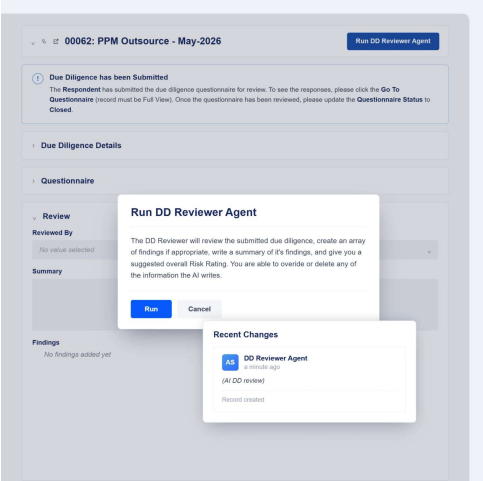

Live data

Live data, not extracts, exports or a separate database

FOCUSED I GOING DEEP INSIDE ONE PROCESS

Same team.
More strategic time.

TPRM ONBOARDING AGENTS

Most third-party programmes are drowning in low-risk vendors, while the Tier 1 and Tier 2 reviews that actually matter sit in the backlog. 4 AI agents work through the routine onboarding steps end to end: reading requests, summarising questionnaires, scoring risk and reviewing contracts. The agents own the grind, and your analysts stay accountable for every decision that matters.

Hours back on Tier 3

Hours back on Tier 3, with full rationale recorded

Faster time to contract

Faster time to contract as the backlog clears itself

Always attributable

Every action attributable to a named Functional User

Tuned to your appetite

Tuned to your risk appetite, you decide what auto-approves

THE 4 AGENTS

1. Pre-Due Diligence
2. Due Diligence Reviewer
3. Risk Assessor
4. Contract Reviewer

THE FOUNDATION

4 principles hold across every capability in Decision Focus Intelligence

These 4 principles hold across all 3 dimensions. External, connected and focused work the same way, on the same foundation. The intelligence is new. The trust model is not.

1 Your data never moves

Your policies, controls, risks and resilience data live in Decision Focus, exactly as they do today. The intelligence layer reads the data you choose to do its work, and only ever writes back when you approve it. Nothing is copied out. Nothing is handed to anyone else.

2 Tunable human-in-the-loop

Every capability is agentic, not autonomous. The AI recommends. Your team decides. Every AI-suggested item is reviewed before anything goes live, and every decision, edit or override is captured in the audit trail.

3 Grounded in your business

The intelligence layer reads your existing policies, risks and risk appetite. It reasons from your rules, not generic guidance. What each capability does and does not touch is your call, configured at the level that fits your organisation.

4 Audit-ready by default

Every AI-suggested item, every human edit, every decision is logged automatically, with the exact policy version applied and full context of the reasoning. You can always show your working, to your board, your auditors or a regulator.

A GRC platform with intelligence built in

The 3 dimensions of Decision Focus Intelligence solve different problems, but they share the same DNA. Your data. Your rules. Your control.

They are all built on your live Decision Focus data. Not extracts, not exports, not a separate database. They all reason from your policies, your rubrics and your risk appetite, keep humans firmly in control with full audit trails, and work inside the platform your teams already use.

That combination is what makes it different. This is not AI bolted onto a GRC platform. It is a GRC platform with intelligence built in.

We are early in this journey, and honest about that. Every capability has been shaped by clients using it, and your feedback shapes what we build next. We would rather show you 3 capabilities working on your data than promise you hundreds of agents.
