

# Seamless integration for secure online assessments within Moodle

Quilgo seamlessly integrates with Moodle to provide a fully automated, plug-and-play proctoring solution. Unlike other plugins that require external API keys or additional software, Quilgo is pre-configured and runs entirely on our backend, reducing system load and ensuring smooth performance.

## Features

### Unique advantages

**Plug & Play:** No extra setup or API keys are needed –they are fully pre-configured. Competing plugins often require manual API integration.

**Scalable & Reliable:** No additional computing power is needed on the customer's Moodle site, preventing system crashes under high loads.

**Screen Tracking:** Unlike other plugins that lack screenshot functionality due to browser limitations, Quilgo fully supports screen tracking.

### Language support (12 languages)

**Community-approved translations:** English, German, Spanish, Indonesian, Hindi, Arabic

**Additional languages supported:** Vietnamese, French, Bengali, Filipino, Portuguese, Japanese

### Quiz-Level configuration

**Enable/disable proctoring per quiz**

**Proctoring methods:** Activity (always enabled), camera tracking, screen tracking, forced tracking mode

### Global configuration

**Regional data hosting** – Store proctoring data in a selected Google Cloud or AWS region

**Custom data retention** – Retain proctoring screenshots and camera captures for 1, 2, or 3 years instead of the default 3 months

### Compliance & security

**ISO 27001 certified**

**GDPR compliant (EU & UK)**

**Secure data processing and storage**

### Reporting & Data Insights

#### Quiz Overview Table:

- Score
- Submission time
- Trust score
- Duration
- Quick access to individual reports

#### Individual Report:

- Face presence detection
- Tab/app switching detection
- Suspicious activity patterns (e.g., copying a question → switching tabs → returning → selecting an answer)
- Suspicious screenshot detection
- Captured photos: first photo, frequent snapshots, all screenshots with flagged images
- List of questions with detected suspicious activity
- Export functionality

### Detailed report breakdown

#### Settings:

- Activity tracking enabled
- Camera tracking enabled
- Screen tracking enabled
- Enforced tracking mode
- Identity verification enabled

#### Time data:

- Start time
- Submission time

#### Results:

- Test duration
- Trust score
- Activity log
- Face presence detection
- Face match
- Screenshots
- Score (absolute & percentage)
- Max score
- Face verification

#### Answer analysis:

- Question
- Score & max score
- Suspicious activity markers

## Unique pricing model: unlimited tests, fair pricing

Unlike other platforms that charge per test, Quilgo uses a **concurrency-based pricing model**. You can create and store unlimited tests while only paying based on the number of users taking a test simultaneously. This ensures **optimal system performance**, preventing slowdowns or failures, even with high test volumes.

Trusted by top companies to power their success
