

Take Command of Your Work

Purpose-built AI for mission-critical roles.

Most AI tools start with a prompt box. Mission teams need software built for the work they actually do.

Legion Mission Packs give teams ready-to-deploy capabilities for specific mission roles. Each Pack brings together applications, workflows, collaboration spaces, permissions, approvals, and AI-enabled actions so teams can move from fragmented information to shared awareness, decisions, and execution.

Choose Packs, not prompts. Operate at machine speed. Maintain human control.

- Mission-ready on day one**
Role-specific apps, workflows, and spaces for operational work
- Governed by design**
Role-based access, approval workflows, audit logging
- Packs to the tactical edge**
Centurion edge systems extend Mission Packs into DDIL environments

Mission Packs

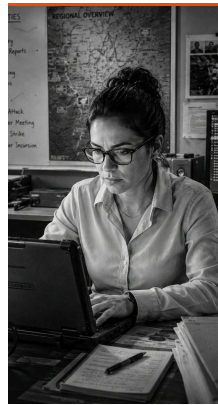

COMMANDER

Users: Commander, Senior Enlisted Advisor, XO, Battle Captain

Before: Command decisions were manual, time-consuming, and often led to incorrect or delayed diagnosis and actions.

With Legion: Customizable mission-configured workflows generate CCIRs, accelerate command and control tasks, to optimize, facilitate and accelerate decisions. Apps accelerate the MDMP and deliver a readiness assessment to drive remediation.

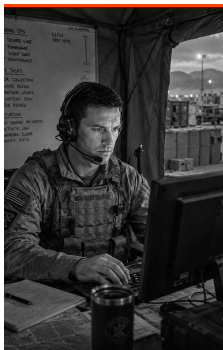

INTELLIGENCE OFFICER

Users: J2/S2 Intelligence Officer, Intelligence Manager, Intel Staff

Before: Disconnected signals lead to intelligence failures where threats are missed and decisions come too late.

With Legion: customizable mission-configured workflows enable intelligence officers to turn fragmented data into a coherent operational picture tied to commander's intent, driving PIR and CCIR management and finished intelligence production.

OPERATIONS OFFICER

Users: S3/J3 Operations Officer, Staff Section Officer, AOB Staff

Before: Operational tempo is constrained by manual coordination and delayed decisions.

With Legion: Customizable mission-configured workflows reduce planning friction and help current ops staff move information into decisions, products, and actions faster while ensuring decisions are aligned with command intent.

MAINTENANCE TECHNICIAN

Users: Maintenance Technician, Field Tech, Maintenance Supervisor

Before: Maintenance delays degrade mission readiness.

With Legion: Customizable mission-configured workflows including parts, scheduling, inspections, manuals enable you to deploy AI in weeks to accelerate maintenance ops.

48X

Faster intelligence summary generation

80%

Reduced anomaly detection and triage time

25%

Increase in technician capacity

88%

Reduction in SITREP processing

Request a Mission Pack Evaluation

We'll help you evaluate the Mission Packs best suited for your environment and operational workflows.
