WHY LEGION + INTEL

Intel powers. Legion operationalizes. Centurion deploys.

Two companies, one operational stack, no integration project left to the customer.

INTEL

Powers the trusted compute foundation, from Intel® Xeon® 6 in the data center to US-made Intel® Core™ Ultra Series 3 at the edge.

LEGION

Operationalizes it with mission-configured, role-specific AI. Legion Packs turn data, models, and workflows into governed capability.

CENTURIUM
BY LEGION INTELLIGENCE

Deploys it wherever the mission goes. Hardware, software, and sustainment in one purchase, offline-first by design.

DEPLOYMENT MODELS

Three lines. One mission platform.

The workflow determines the footprint.

The governance never changes.

CENTURIUM III

Operator systems, forward teams

BUILT ON

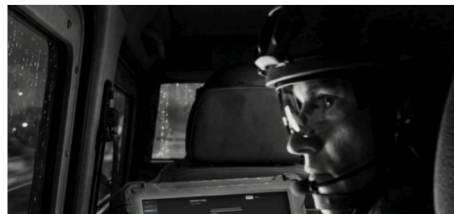

Intel® Core™ Ultra X7 358H. CPU, GPU, and NPU on one US-made Intel 18A SoC.

RUNS

Local models and local RAG, fully offline, zero cloud dependency.

USERS

1

CENTURIUM X

Vehicle-mounted and forward ops

BUILT ON

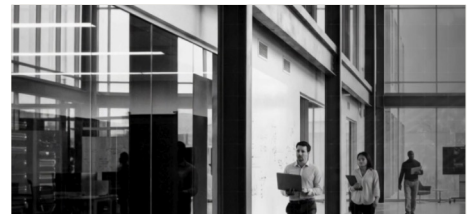

Intel® Xeon® 6 host CPU with discrete GPU on HPE Edgeline EL8000. TAA-compliant option.

RUNS

Mission Pack runtime, sensor fusion, and DDIL mesh operation.

USERS

UP TO 50

CENTURIUM L

FOBs, embassies, air-gap networks

BUILT ON

Intel® Xeon® 6 with discrete multi-GPU on HPE ProLiant DL380a Gen12. TAA-compliant option.

RUNS

Agentic orchestration and intelligence fusion behind the air gap.

USERS

UP TO 350

GOVERNED BY DESIGN

Every line runs the same Legion platform and Mission Packs, with role-based access, approvals, and audit logging. Intel TDX and Intel Secure Supply Chain extend trust into the silicon.

Request a Centurion evaluation.

We will map a configuration to your environment, constraints, and workflows.

WE DELIVER WHAT THE MISSION DEMANDS.
