LEGION INTELLIGENCE

# The AI Apps for Your Job Already Exist. Your Team Can Build the Next Ones.

A Pack is a set of ready-to-run AI apps for a specific job: situation reports, threat assessments, work orders, recovery plans. Your experts set how it works, and it delivers the finished product with sources and approvals attached.

**88%**

reduction in SITREP processing time, achieved at U.S. Special Operations Command

## Your team has GenAI.mil or ChatGPT.

Those tools give smart answers on almost any topic, but it takes time to build AI apps and workflows that do your job. That's an extra job on top of the one your team already has.

01

### The work comes back done.

Agents gather, cross-check and draft from your own data. Your team starts from a finished product, works from the same version and spends its time on judgment.

02

### Guided by your experts. Running in weeks.

Your people shape how the Pack does the job and can change it as the work changes. Every Pack is built on one platform that's already secure and connected to your systems, so there's no nine-month implementation before the work starts.

- ✓ **Nothing moves forward without your approval**
- ✓ **It runs on classified networks and at the disconnected edge**
- ✓ **Your team can build more or change it without waiting on Legion**

## Packs for the work your teams already do
