

Welcome to our newsletter

Time flies. So it's about time for a new update with the latest news from Heecon.

Dear valued customer,

At Heecon, we have been very busy over the past year. A lot has happened and there are exciting things on the horizon. We would like to take a moment to share the latest developments at Heecon bv with you.

Thanks to our customers

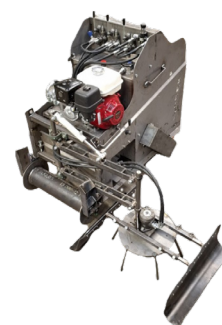

The past season was intensive, but above all successful. We could never have achieved this without the great collaboration with you as a customer.

Thank you for your trust, pleasant communication and active participation. Working together on solutions and improvements gives us energy – and that is partly thanks to you.

New machines: compost spreader and compost distributor

In 2024, we developed a compost spreader for a specific customer. What started as a customized solution grew into a machine that generated more interest than expected. We are now proud to announce that we will be building our second compost spreader, which will go into production at the end of January.

We have also developed a compost spreader. This was first used in November and is now being deployed with great success. The machine creates neat, even growing beds in a single pass. This not only ensures a beautiful end result, but also delivers significant savings in labor hours and increases the efficiency of the work process.

Planning towards 2026

Although the year has only just begun, our machine construction schedule is already filling up quickly. Even for 2026, most slots have already been reserved, and new requests are still coming in. This underscores the continuing demand for customised and reliable machines. In order to continue to guarantee quality and delivery times, we are therefore planning further and further ahead. We can produce 10 to 12 large machines per year, so the available slots are limited. Do you have plans or ideas for the coming years? We would be happy to discuss them with you.

Brainstorming about a sweeper for strawberry cultivation

We are currently brainstorming about a sweeper for strawberry cultivation. Because there are many different cultivation systems, developing a single universal machine is quite a challenge. But we are confident that we will succeed. We hope to be able to give a first demo to a customer halfway through this year.

Good news

It is likely that flexi-jobs will be permitted in our sector from April 2026. We would like to let you know now that we are enthusiastic about this development. During busy periods, we hope to be able to call on extra hands—perhaps yours! Interested in working with us? Keep an eye on us and apply as soon as you can. We look forward to realizing great projects together.

Vacancies: Welder/Assembler and 3D Draftsman

Due to the growth of our projects, we are looking to strengthen our team. We currently have a vacancy for a welder/assembler and a 3D draughtsman.

At Heecon BV, you will work on varied, innovative machines that are often built entirely to order. We are looking for someone with technical insight, an eye for quality, and a passion for machine construction. Short lines of communication, a pleasant working atmosphere, and room for personal development are central to our company. Are you—or do you know—the right person? Please let us know.
