

BUILD A LIVING, DEFENSIBLE CYBERSECURITY ROADMAP

Most technology and security leaders face the same planning challenges: too many risks, not enough resources, and relentless pressure to justify every cybersecurity dollar. Replace static spreadsheets and endless audit chasing with a board-ready, data-driven roadmap you can update with a few clicks.

Cyber Heat Map® is a complete system to streamline your planning, not just software.

We combine structured, collaborative assessments; live expert coaching; and a trusted peer network so resource-limited teams can build clarity, show progress, and defend every decision.

COACHING + TOOLS + COMMUNITY → THREE PILLARS. ONE ACTIONABLE ROADMAP.

- Collaborate with a founder-led assessment. Complete your roadmap in hours, not weeks.
- Prioritize improvements by risk, resource impact, and compliance value.
- Win buy-in with simple, executive-ready roadmaps, live group coaching, and actionable peer discussion.
- Grow as your needs evolve. No shelfware and no outside consultants required to maintain your plans.

More than 140 leaders have used Cyber Heat Map® to build actionable plans that drive results.
