

More Than Components.

Beyond our core components, CAC Wall Panels offers a suite of additional services designed to keep your projects moving. From sourcing quality bulk lumber to precision milling and direct-to-site trucking, we provide the materials and logistics support that builders rely on — all backed by our 25 years of manufacturing expertise.

BULK LUMBER

Quality structural lumber, delivered to your site.

CAC Wall Panels supplies premium bulk lumber to contractors and builders across the Midwest. Whether you need Southern Yellow Pine, Spruce Pine Fir, or Hem Fir for your framing package, we source and supply the same high-grade materials used in our own manufactured components — ensuring consistent quality from framing through finish. Bulk lumber orders can be coordinated alongside your component delivery, simplifying your supply chain and reducing the number of vendors you need to manage on any given project.

- Southern Yellow Pine, Spruce Pine Fir, Hem Fir available
- Sourced from the same suppliers used in our component manufacturing

MILLING

Custom milling services for your exact specifications.

Our in-house milling capabilities allow CAC Wall Panels to process lumber to your exact dimensions and specifications. From custom ripping and cross-cutting to specialty profiles, our production facility handles milling requests that standard suppliers simply can't accommodate. Milling services are particularly valuable for unique architectural details, non-standard framing members, and custom components that require precision beyond off-the-shelf options.

- Custom dimensional resizing
- Specialty profiles for unique architectural applications
- In-house production ensures tight tolerances and fast turnaround

TRUCKING

Reliable delivery, direct to your jobsite.

CAC Wall Panels partners with CTI Transport to ensure your components and lumber arrive on time, in the right sequence, and ready to install. Our drivers are experienced with construction site logistics — delivering to tight urban sites, rural locations, and everything in between. All deliveries are coordinated with your project schedule, and our team bundles loads so your crew can work directly from the truck with minimal handling time on site.

- Company-operated fleet serving a 250-mile primary delivery radius
- Larger projects accommodated up to 1,000-mile range
- Bundles loaded for efficient jobsite unloading
- Coordinated delivery scheduling to match your framing timeline
