

Tracker Closer Looks Section Set Up

1. CMS Structure

Keep all *Closer Looks* content in a CMS Collection. Make sure to include at least:

- A **multi-reference field** to tag each post with related metric cards
- A **link field** to store the direct URL for each post

2. Static Pages for Topics

Create each topic as an individual **static page**. Organize all topic pages within the same folder for easy management.

3. Scalable Page Structure

- Design and build one topic page to a **production-ready** state
- When creating new topic pages, simply duplicate the finished page and update the content inside.

4. Navigation

Build the page navigation using **static elements**, not CMS-based elements.

5. Content Section

Use a **Collection List** to display posts. Apply a filter to show posts for the relevant topic only.

6. Load More than 10 Cards

Add the **List Nest** attribute by Finsweet to the Collection List to allow loading more than 10 cards on each topic page.

7. Generate and Store Post URLs

After publishing the posts, Webflow will generate the final URLs.

- Copy each post's URL
- Paste the URL into the corresponding CMS Collection **link field**

8. Highlight Current Page in Navigation

- Replace any placeholder link with the **actual URL** of the current page
- The current state style should automatically apply to the active link
