

ORBUSINFINITY FLOW: INTEGRATION AND WORKFLOW DESIGNER

Keep Architecture Data Decision-Ready

OrbusInfinity Flow is a complete integration platform as a service (iPaaS) built into OrbusInfinity. It connects virtually any system and automates workflows to synchronize data, eliminate manual effort, and keep enterprise architecture accurate and decision-ready.

Every Use Case, Covered

Enterprise Architecture

IT Portfolio Management

Business Architecture

Business Process Management

Risk, Reliance, and Compliance

AI Adoption and Governance

THE CHALLENGE

Your Data is Only as Good as Your Last Update

Stale and missing data leads to poor decisions and risk

When data sits in silos, reports and dashboards reflect the last manual update, not what's true in your architecture right now

THE SOLUTION

Your Data. Live, Connected, and Yours to Control.

Synchronized systems with fresh, updated data

- 150+ pre-built application components incl. ServiceNow, Jira, SharePoint, Cherwell, OpenAI
- Connect CMDBs, ERPs, cloud platforms, ITSM, collaboration, and data platforms
- REST API to connect to additional applications

Architects buried in admin

Manual effort checking attributes, importing objects, and reconciling systems consumes cycles meant for architecture and strategy

Automated workflows reduce admin work

- Bidirectional sync keeps OrbusInfinity current as source systems change
- Calculate, transform, and enrich data
- Execution logs and version history for monitoring

Events and handoffs go unnoticed

Without automated triggers, lifecycle events and approvals rely on someone remembering to act

Automated notifications and handoffs

- Custom notifications via Microsoft Teams and other channels
- Owner-based alerting and lifecycle event triggers
- Automated approvals and workflow-driven handoffs

Integration work stalls in a queue

Connecting a platform to OrbusInfinity means raising tickets and waiting on internal teams or specialists

Architecture teams empowered to act

- AI-assisted integration and workflow designer with scheduled and event-based triggers
- Create, amend, and manage workflows without engaging an integration specialist
- Adapt quickly as your application landscape changes through growth or M&A

With AI assistant, low-code tools, 150+ pre-built components, and a REST API, architecture teams can design and manage integrations and workflows. No integration specialists required.

ORBUSINFINITY FLOW: INTEGRATION AND WORKFLOW DESIGNER

Why OrbusInfinity

Native iPaaS built in OrbusInfinity

No third-party license. No onboarding. Integration lives inside the platform you already use.

Architect-owned from day one

No specialists. No backlogs. AI assistant empowers architects to build, manage, and adapt their own integrations and workflows.

Flexible, built for change

Gain speed, reach, and efficiency from the platform's pre-built components, REST API, and workflow automation.

Real Outcomes:

Drive effective business transformation

Integrated data and automated workflows keep change initiatives moving

Create AI-driven value

Govern AI assets, surface risk, and design AI solutions within standards.

Optimize technology investments

Reduce integration build effort and keep portfolio and technology lifecycle data accurate for decisions.

Accelerate market innovation

Faster connectivity and automation free teams to focus on innovation

Strengthen resiliency and compliance

Replace ad-hoc scripts with repeatable, traceable workflow execution.

OrbusInfinity has enabled us to identify technological obsolescence that had previously gone unnoticed, helping us prioritize projects and address critical weaknesses in our IT landscape."

IT Architect, Insurance \$100Bn+

Higher Output. Higher Accuracy.

Chief Information Officer

Make decisions on live, accurate estate data, not the last time an architect updated a record.

Enterprise Architect

Automate manual data checks and imports. Spend your time on architecture, not administration.

IT Portfolio Manager

Keep product lifecycle data current automatically. Save time on the admin.

Connect Systems. Automate Work. Keep Architecture Current.

See how OrbusInfinity Flow gives your team the connections, automation, and accuracy to focus on what matters.
