

Agito Medical Environmental Policy

About this Policy

Agito Medical is committed to minimizing its environmental impact across all operations, products, services, and supply chain. This Environmental Policy forms a core component of our Environmental Management System and reflects our integrated approach to responsible business practice.

Our environmental commitments support the United Nations Sustainable Development Goals (SDGs) and are embedded within our broader ESG strategy and long-term business objectives, by our core values of efficiency, circularity and collaboration.

Key Environmental Programs

- **Business Circularity:** We embed circular economy principles across our activities, extending product lifecycles and collaborating closely with our value chain partners. Our circular business model encompasses refurbishment, recycling, and waste reduction.
- **Waste Management & Recycling:** We actively reduce waste generation across all operational areas. The vast majority of used paper, cardboard, wood, plastics, organic, and electronic waste is responsibly recycled, thereby minimizing our contribution to landfill waste.
- **Energy Efficiency:** We source electricity from renewable sources and invest in energy-efficient technologies for our offices and operations. We also continuously monitor our energy consumption and water usage and set reduction targets accordingly, in direct support of SDG 7 (Affordable and Clean Energy).
- **Responsible Supply Chain:** We enable SDG 13 (Climate Action) by partnering with suppliers who share our environmental values and demonstrate environmental responsibility, such as ISO 14001 certification. We also, to the extent possible, source products and materials with lower environmental footprints, including recyclable or reusable packaging.
- **Environmental Risks and Opportunities:** We maintain a robust risk management framework that allows us to assess and mitigate environmental risks and proactively harness sustainability opportunities arising from our operations and supply chain.

Governance, Measurement, External Reporting

Our sustainability strategy is regularly reviewed and updated based on stakeholder feedback and emerging best practices, as well as regulatory changes.

Our environmental performance is tracked against targets approved by the Science Based Target Initiative (SBTi) and reported annually through our sustainability disclosures, in accordance with applicable reporting standards.

As part of our ISO 14001-aligned Environmental Management System, this Policy is subject to regular reviews, taking into account stakeholder input and changes in regulatory requirements. We will strive to meet or exceed current and future environmental standards and continue working towards a more sustainable future.

By adhering to this Policy, Agito Medical takes actionable steps to minimize our environmental footprint and advance towards net zero emissions. Our [Environmental Policy](#) guides our efforts to deliver long-term sustainable value for society, our partners and our business.
