## **PFAS (Per- and polyfluoroalkyl substances)**

### **Manufacturer Declaration of Conformity**

Per- and polyfluorinated alkyl substances (hereafter abbreviated as PFAS) are a group of extremely persistent chemicals that are used in many consumer products. PFAS are used in products because they can, for example, increase oil and water repellence or withstand high temperatures. There are thousands of different PFAS on the market. As these substances are persistent chemicals, they accumulate in humans and the environment.

**Alpha 3 Manufacturing confirms that to the best of its knowledge none of its products contain PFAS. In addition, Alpha 3 does not employ PFAS in materials, production processes, or packaging.**

Based on our current knowledge, our raw material suppliers do not use Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) in the manufacture of their products. We do not routinely analyse our products for the *above* substances but base our assessment on confirmations from our suppliers.

Alpha 3 has processes and procedures in place to ensure that our suppliers meet our expectations. We communicate our requirements to our suppliers to ensure that PFAS are not used in our products. We subsequently obtain declarations from our suppliers confirming their commitment and upstream due diligence.

Alpha 3 is diligently working to ensure that our supply chain is, is going to or remains free of PFAS.
