

OFFSHORE HELIDECK SERVICES

Offshore Helideck forms the lifeline of offshore assets. This is the place where offshore workers arrive and leave to their families after the end of their offshore period.

Offshore operators and local legislators understand the importance of the helideck. They keep their helideck in proper condition to maintain the high level of safety and operatibility.

Conbit offers a wide range of services to achieve this goal.

Offshore Helideck Services

Figure 1 shows a 3D model and a technical drawing of the shipyard crane. The 3D model on the left illustrates the crane's structure, including the main span, the helipad, and the base. The technical drawing on the right provides detailed dimensions and labels for the crane, such as the main span (72000 mm), the height (10000 mm), and the base width (10000 mm). It also indicates the crane's location (SHIP YARD) and the vessel it serves (CRANE VESSEL, BLD-1).
