

AI in Jobs

Article: AI in Jobs

AI, or artificial intelligence, is changing the way people work. AI is a kind of computer technology. It helps machines think and learn like humans.

Today, many jobs use AI. In shops, AI helps check prices or count money. In hospitals, AI can look at X-rays and help doctors. In airports, AI helps with bags or security. Even online, AI can help answer questions when you shop.

Some people like AI. It makes work faster and helps with simple jobs. For example, AI can clean floors or answer easy emails.

But some people worry about AI. They think it may take jobs from workers. If a machine does the work, what will people do? That is a big question today.

Many experts say we need both AI and people. AI is fast, but people are kind and smart in other ways. In the future, AI may help with boring tasks, and people can do the more creative work.

Vocabulary Practice:

Word / Phrase	Definition
AI	Artificial intelligence; smart computer programs
Job	Work people do to earn money
Machine	A tool that helps people do things
Expert	A person who knows a lot about something
Creative	Making new things or ideas
X-ray	A photo doctors use to see inside the body
Security	Keeping people and places safe
Worry	To feel afraid something bad might happen
Task	A job or piece of work
Future	The time that comes after now
