Transforming Healthcare In Grenada

Bringing together improved care today at the General Hospital with a new teaching and research hospital at Hope Vale.

More specialist services, modern facilities and systems will meet more healthcare needs here at home.

Strengthening Care Today

Mount Sinai's partnership with Grenada General Hospital is strengthening the systems behind everyday care.

20
Months Of Collaboration
Working with Mount Sinai since February 2025.

14
Areas Of Work
Hospital operations, quality, safety and staff development.

35+
Procedures And Policies
Clearer standards for how care is organized and delivered.

11
Improvement Projects
Practical changes to how hospital teams work.

35+
Training Sessions
Building staff skills

25
Daily Management Boards
Tracking daily priorities

200+
Staff Trained
Clinical and non-clinical staff trained in emergency care procedures.

Specialist Care For Tomorrow

Project Polaris features a planned 250-bed teaching and research hospital at Hope Vale for Grenada, Carriacou and Petite Martinique.

New Services

- Oncology
- Cardiology
- Nephrology

Expanded Services In

- Emergency Care
- Diagnostics
- Surgery
- Intensive Care
- Maternity
- Paediatric Services

Specialist services are planned to expand in phases.

The Care You Need

We are bringing clinical needs, operational expertise, and technological advancements together in the new hospital.

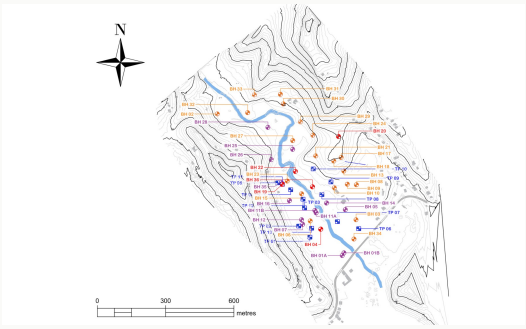

Workforce and operational planning are progressing alongside the design, aligning care spaces with the teams who will use them.

The new hospital's teaching and research role will support medical education and professional development.

Site Selection Confirmed

Technical experts tested the 84-acre property. Comparative analysis and design and engineering recommendations informed the selected site.

Ground Investigation Study

Hospital Site Positioning

Harder Ground

Assessments indicate harder ground can support the hospital without extensive piles or utility moves.

Practical Access

The selected layout was assessed as outside the floodplain, with less road and retaining-wall work.

Cost And Time

The location was selected to limit the ground preparation needed before construction, helping manage costs and the time required to deliver the hospital.

Planning For The New Hospital

Thoughtful planning brings together the people, systems and equipment that will support patients at the new hospital.

1	Trained Teams	Preparing staff to deliver care.
2	Established Clinical Systems	Putting care processes and systems in place.
3	Tested Equipment	Confirming equipment is safe and ready for patient care.

These preparations support safe, effective care from the outset.
