When Snow Isn't Just a Matter of Chance – Training for Snowmakers and Snowmaking Managers

Producing snow efficiently. Cut costs. Improve slope quality.
A good snowmaking manager doesn't impress with massive snow piles –
but with technical expertise, perfect timing, and efficient snow production.

White slopes aren't a coincidence – they're the result of preparation.

Learn how to get the most out of every snow-making window through technical know-how and smart planning – for quality, safety, and economic efficiency.

When Mother Nature takes her time, **technical snow becomes the foundation** of a successful winter season. Every time window counts: **for base coverage, ongoing snowmaking**, and the targeted use of resources.

Our training courses for snowmakers and snow making managers combine **theory and practice** in a clear, hands-on format – from the start of the season to summer system shutdown.

The training is structured in **two progressive modules**:

- ▶ **Module 1: Systematic base layer snowmaking**
- ▶ **Module 2: Refreshment snow-making during the season**

Training content includes:

- Key factors influencing snow production
- Basic structure of a ski slope
- Efficient snowmaking & strategic snow management
- Placement of mobile snow making machines
- Safety in operating snow making machines
- Maintenance & summer storage of equipment

Your benefits at a glance

- ✓ **Reducing production costs for technical snow**
- ✓ **Optimizing resource and energy consumption**
- ✓ **Avoiding overproduction**
- ✓ **Improving slope quality in the long term**
- ✓ **Training your staff efficiently – tailored & flexible**

Each module can be **booked individually** or as a **complete package** – available as **theoretical instruction, practical training, or a powerful combination of both**.
