Our Technologies

Otrofy developers use the latest technologies to make sure that the design is carefully and perfectly implemented and take care of backend development.

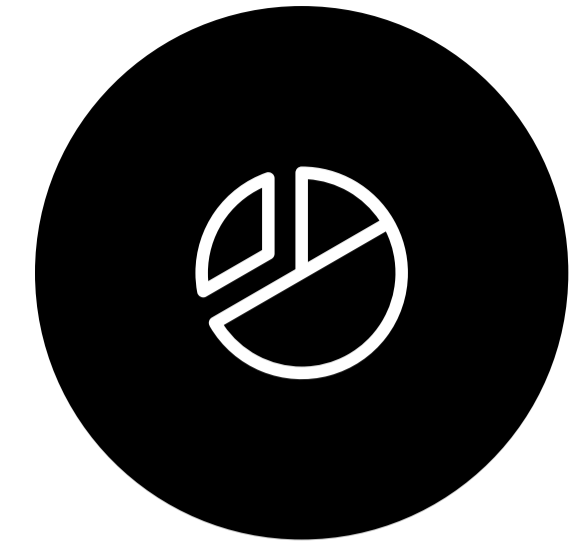

Services

From concept to design, from development to publishing, Otrofy offers services with complete transparency through each phase of the process.

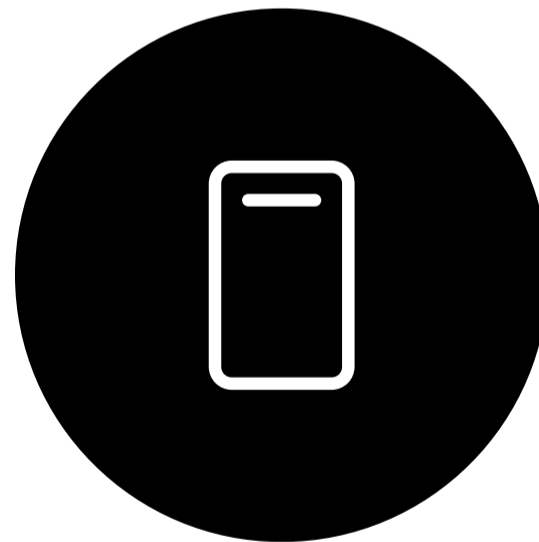

Web Development

We have onboard software engineers that can build a website of different complexity as a great addition to your mobile application.

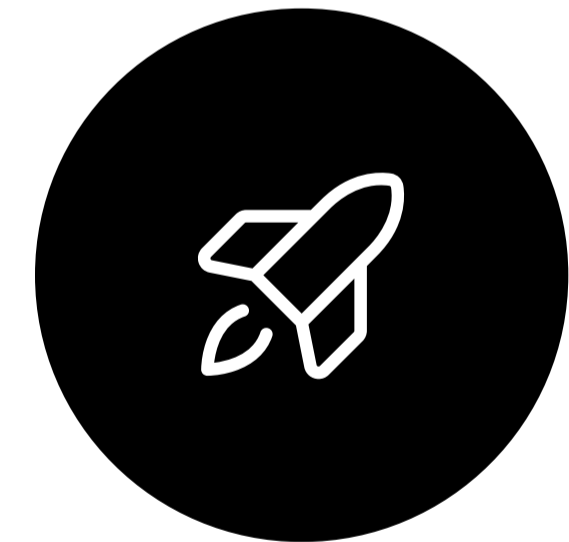

UX/UI Design

Our talented design team is passionate about the user experience, in touch with the latest trends, and understands the importance of first impressions, making sure we create the best design for your brand.

Mobile Apps

Our experienced engineers will set up a reliable server environment and build a mobile application of any complexity. If any issues do arise, the Otrofy team will fix them.

MVP Projects

We help early-stage startups to define main features and build an MVP, using our design and development skills. It saves them time and budget.

Otrofy Team

We're a growing team of experts, passionate about helping you succeed

Based in Toronto, Canada, with decentralized team members located around the world, the effective remote working skills so essential today are second nature to us.

We treat each project like it is our own and treat every feature as important. We appreciate an open and honest relationship with the client and provide genuine feedback and fair recommendations in our approach and the products we build.

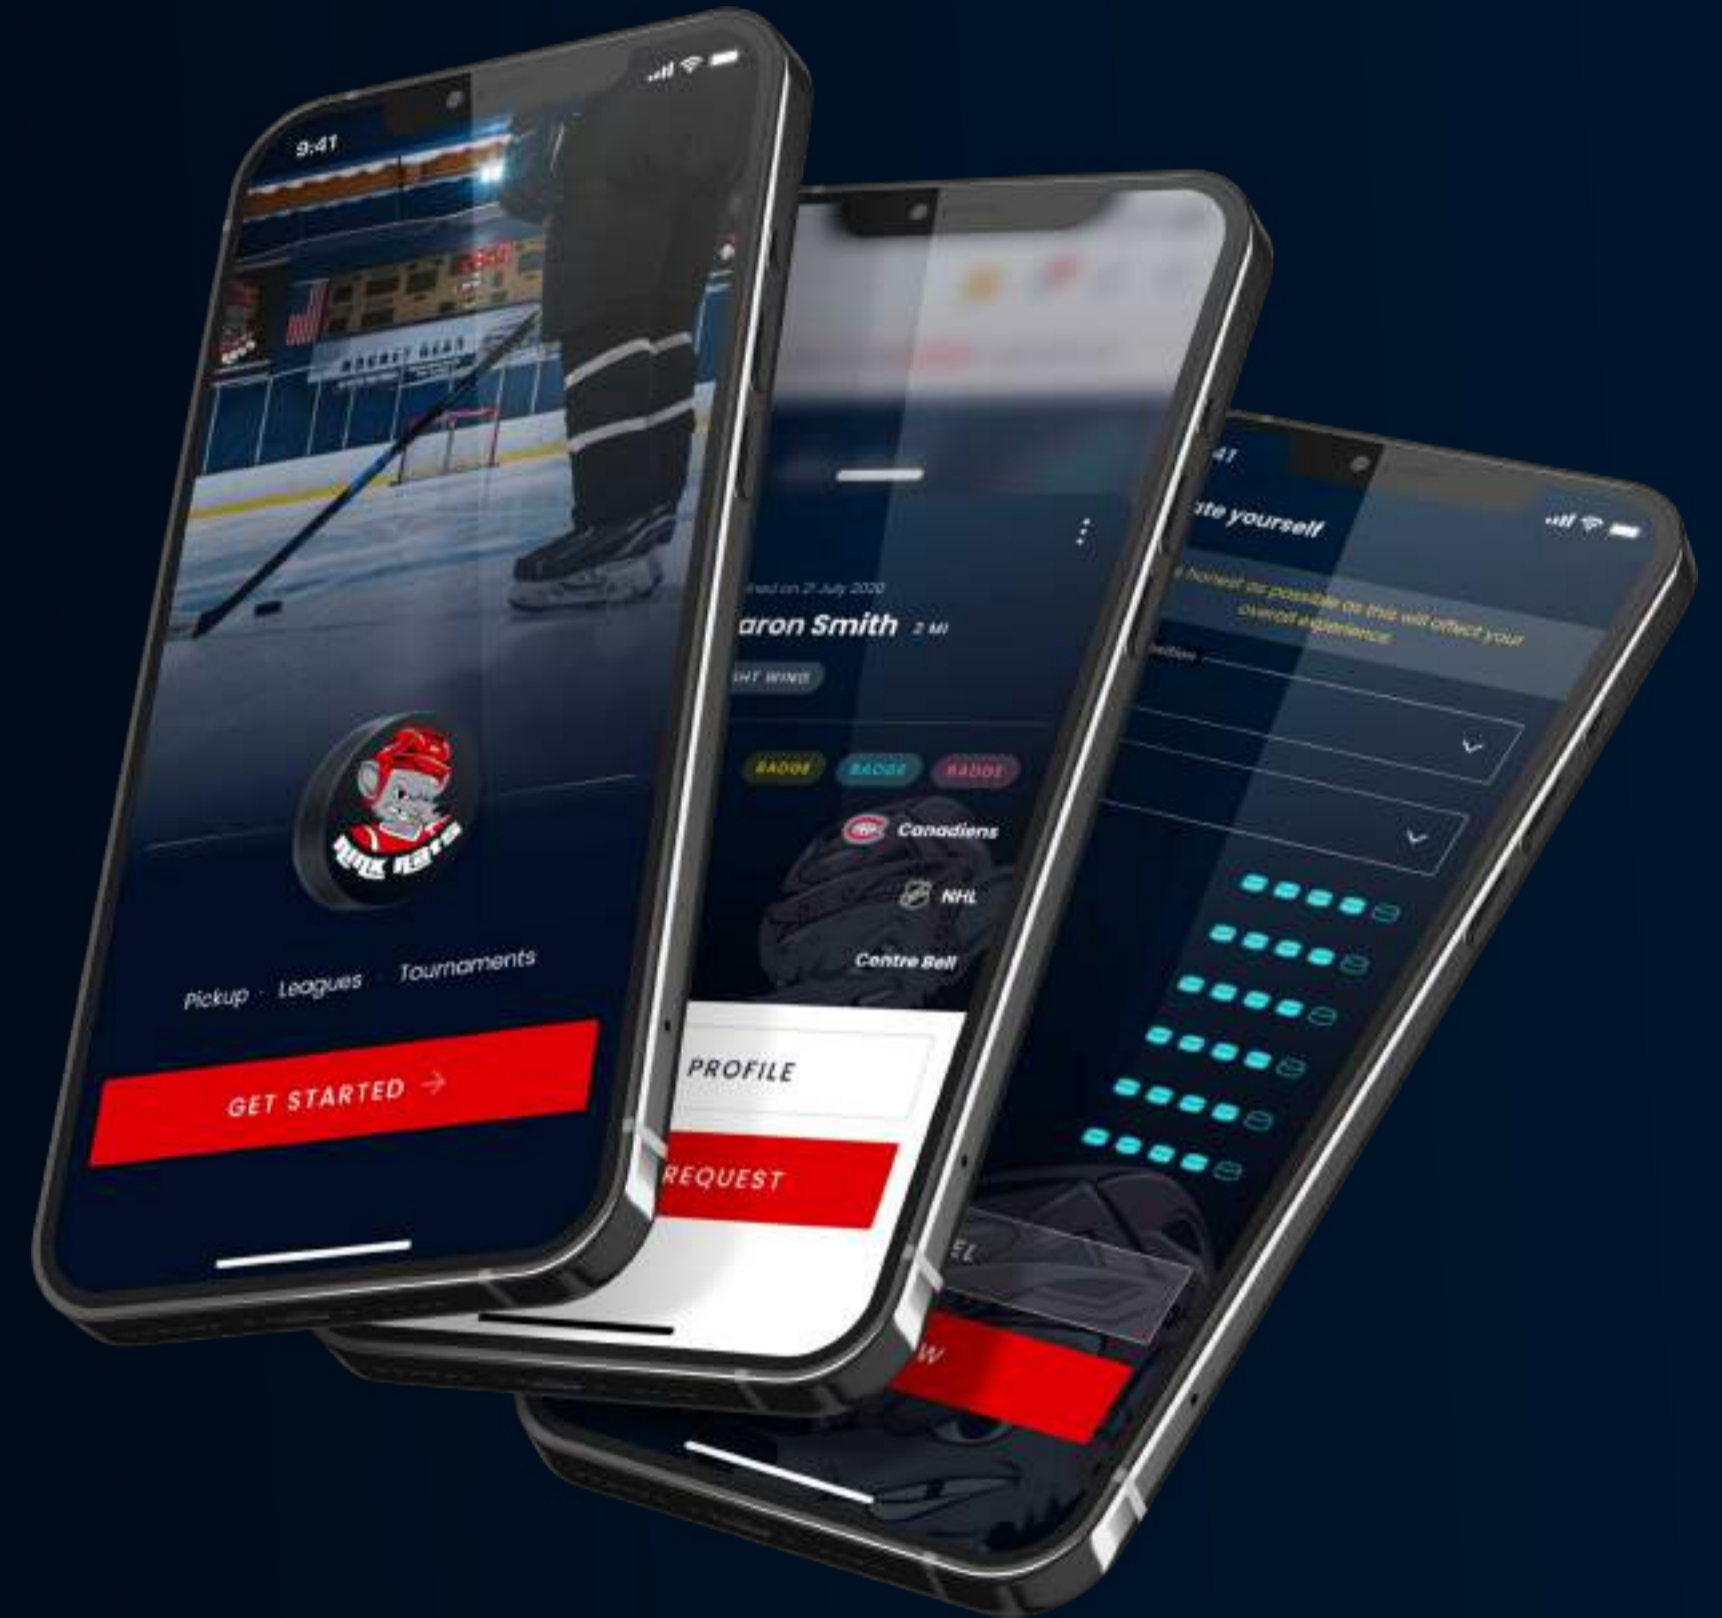

RINK RATS

A mobile app designed for the community hockey players.

Our team have taken the whole development process, including front end, back end of mobile application, as well as quality assurance and publishing on both platforms.

We have developed fully functional chat that connect hockey players, calendar to book the ice rink, integrated Stripe payment system, receiving notification when pickup game is open or available for registration and other cool features.

PRIVATEPORT

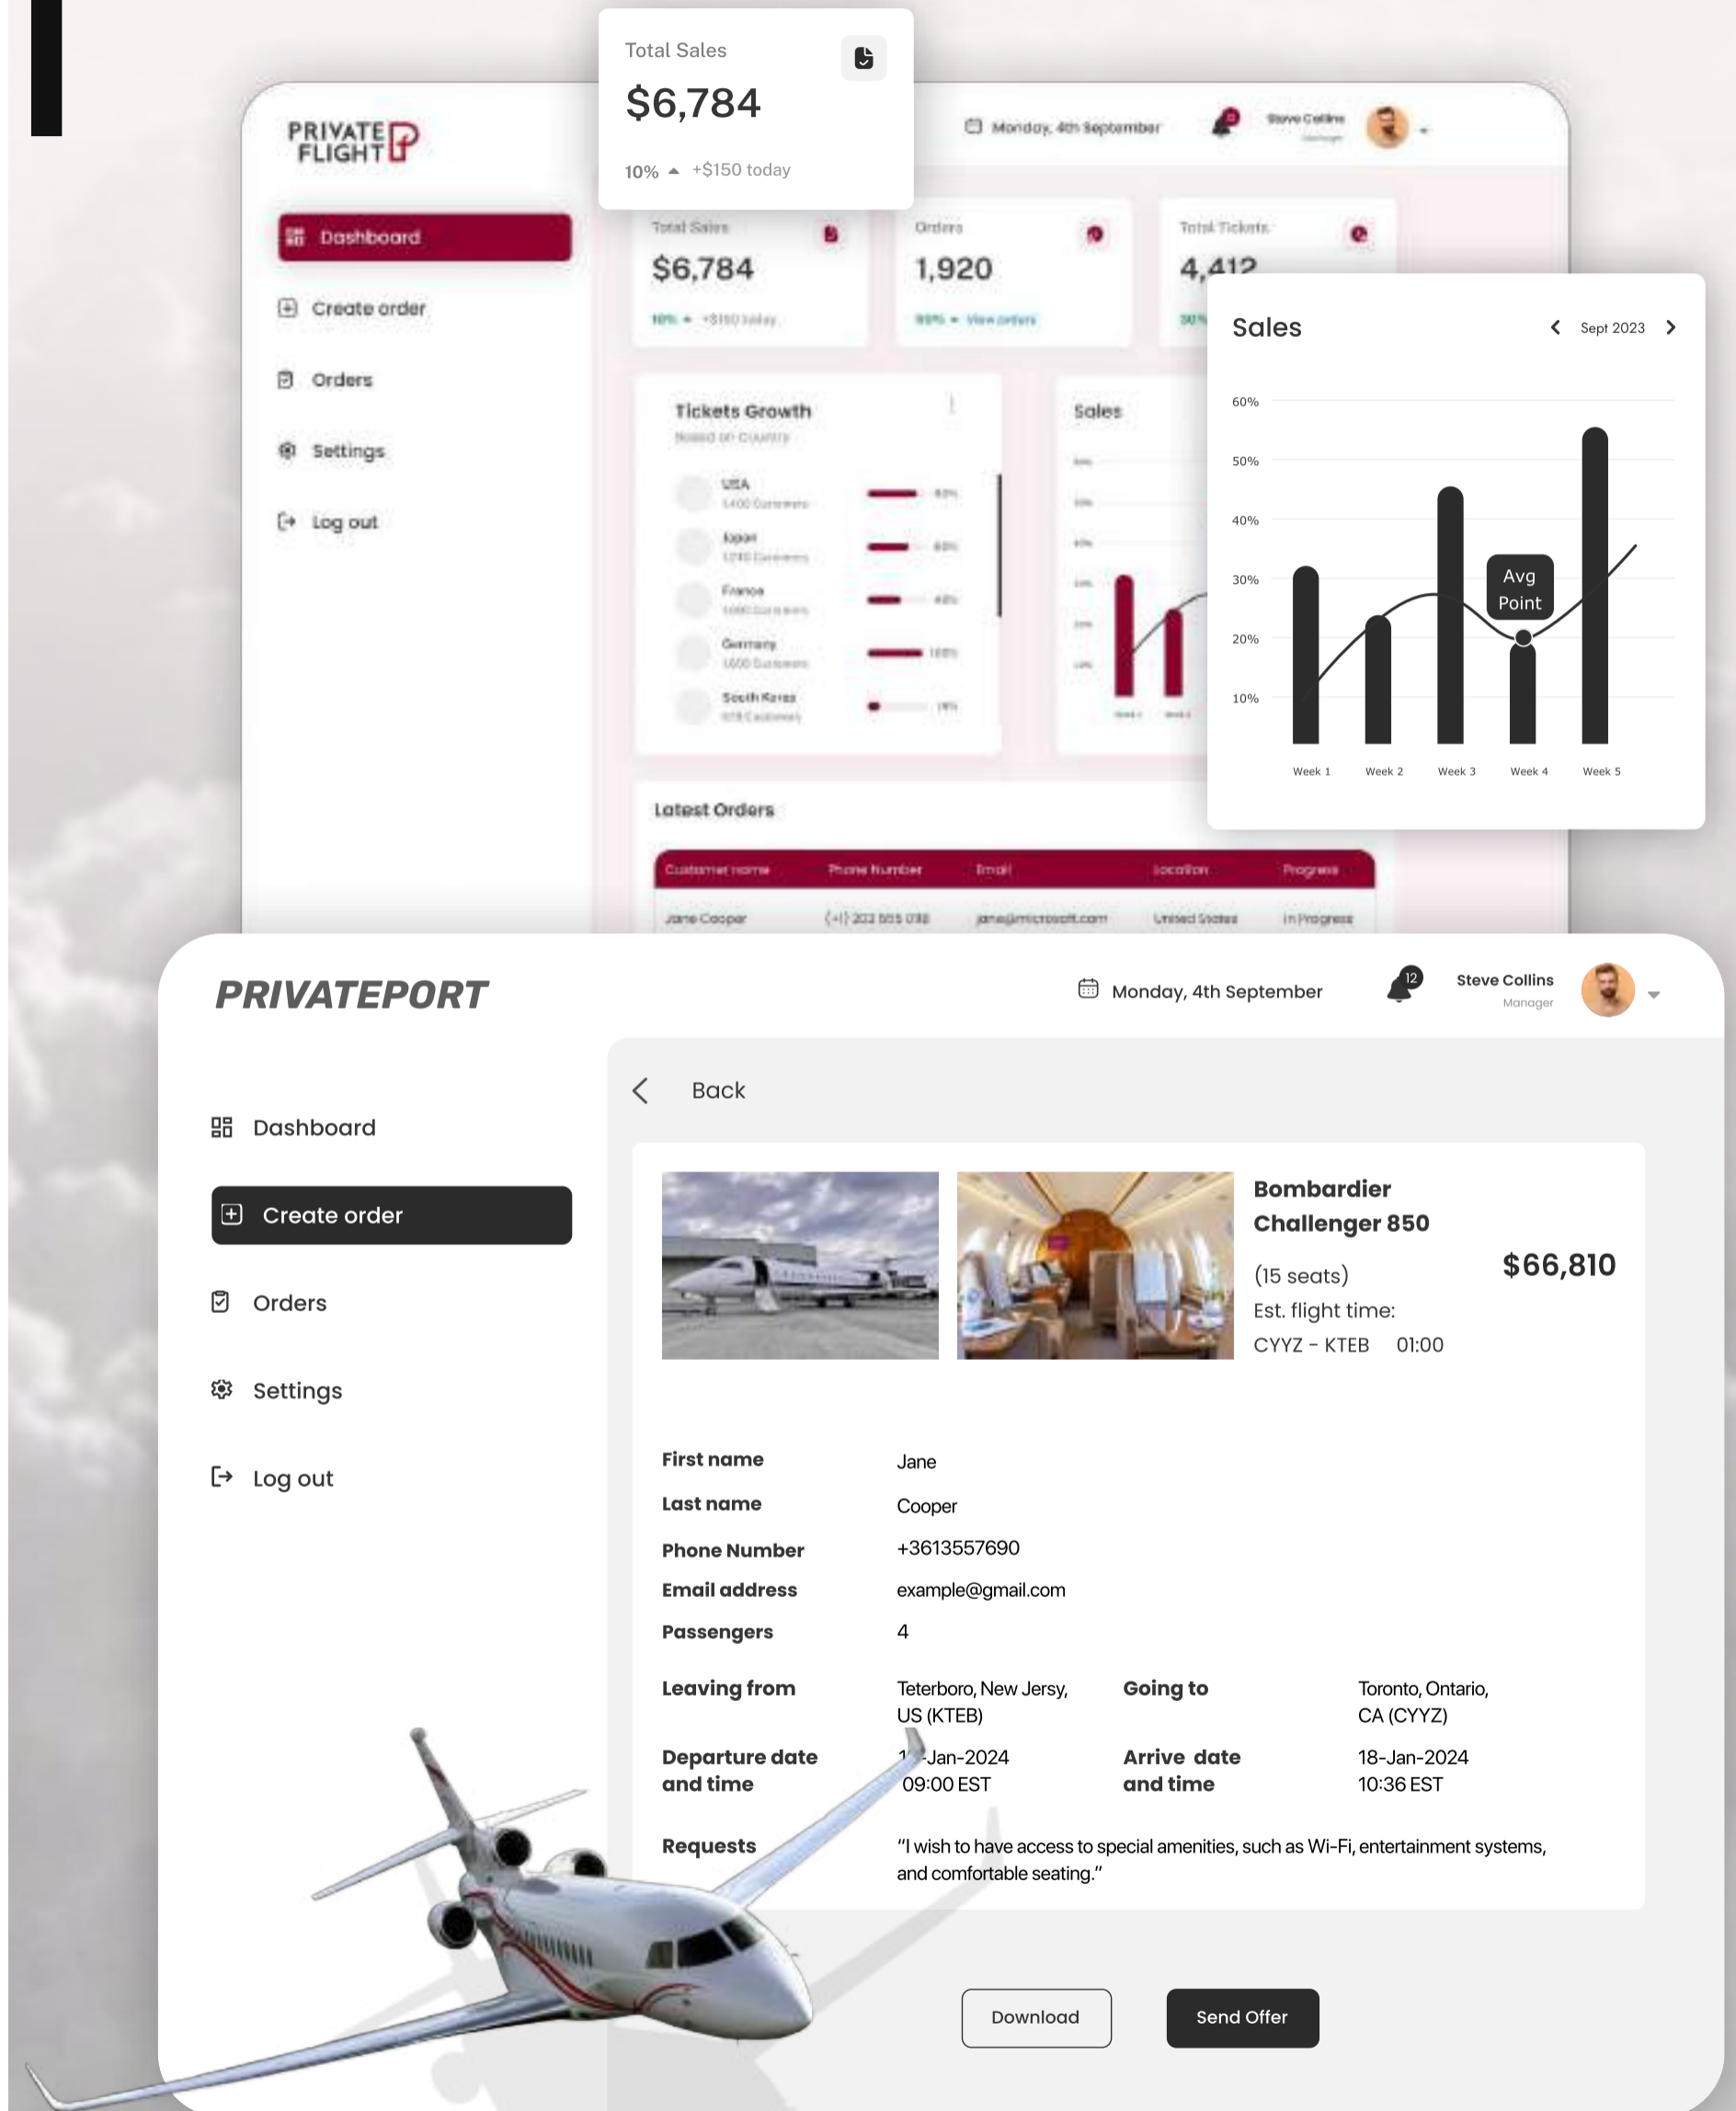

Private flights Tablet App

Privateport is a tablet application designed for private aviation professionals, enabling the seamless creation of personalized client flight offers. The app automatically generates professional proposals based on flight and client details, with the flexibility to add custom messages or promotional information. Users can attach PDF brochures or supporting documents, and preview the offer before sending to ensure everything is accurate and polished. Privateport streamlines the process while maintaining a premium, client-focused experience.

SYNAGEIN

Social Fitness App.

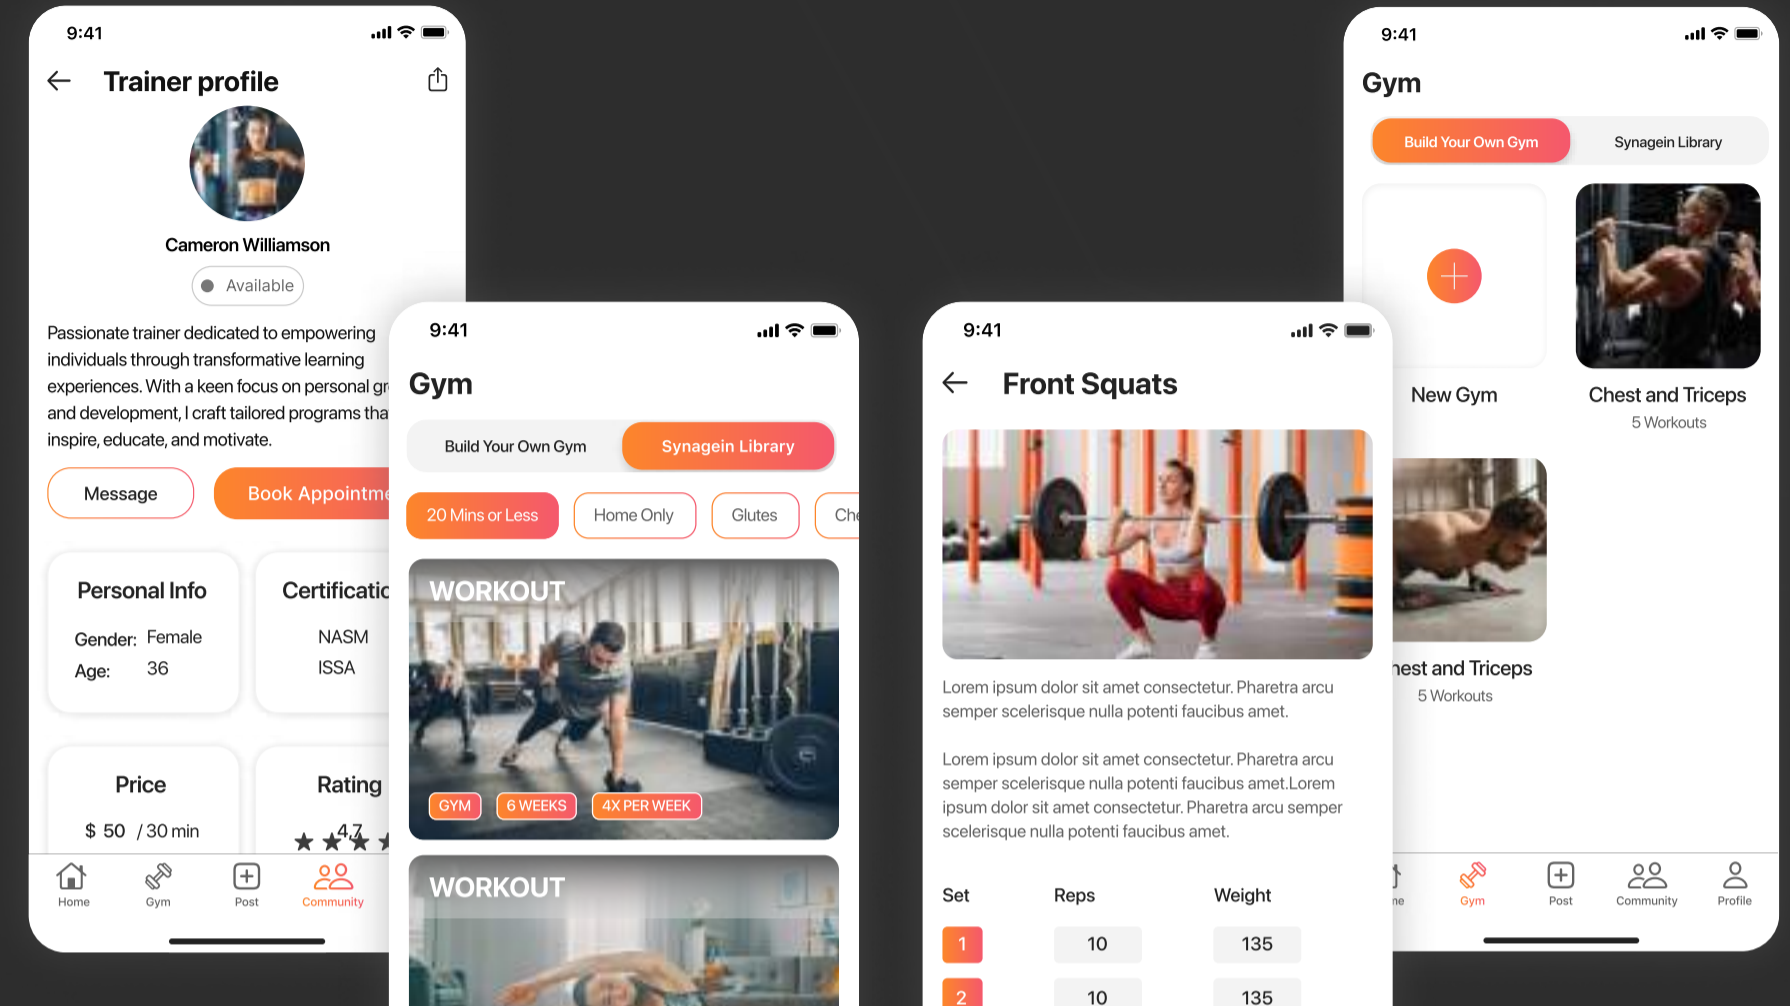

For fitness enthusiasts and trainers alike, staying motivated and connected can be challenging. Synagein needed an engaging digital platform that fosters a supportive fitness community while offering tools to book sessions, communicate, and track progress. Trainers also needed a space to share content, connect with clients, and earn income, creating an all-in-one fitness ecosystem.

Otrofy partnered with Synagein to bring the Social Fitness App to life, providing UI/UX design across the website, mobile app, dashboard and website development.

PROGRESSIVE MOTION

Bluetooth Mobile App.

Progressive Automations, a leader in Canadian motion control technology, needed a powerful yet user-friendly mobile app to help customers easily control their smart devices in homes and offices. With products like adjustable desks and TV lifts requiring seamless IoT integration, they sought a solution to connect, customize, and control these devices effortlessly.

Otrofy developed the Motion iOS App to streamline the user experience with Progressive Automations' devices. We provided UI/UX design, logo creation, and full mobile app development, delivering a sleek and responsive app.

bboxx

Marketplace App.

With our app, users can browse through a wide range of products from different categories including electronics, fashion, home decor, and much more!

One of the key features of our app is the secure and easy payment system. Users can make purchases directly from the app, ensuring a smooth transaction process. Our app also ensures the safety of transactions by implementing a secure messaging feature within the platform. Buyers and sellers can communicate directly to negotiate prices, ask for more information, or arrange delivery details.

MAGUEY MELATE

Tablet App

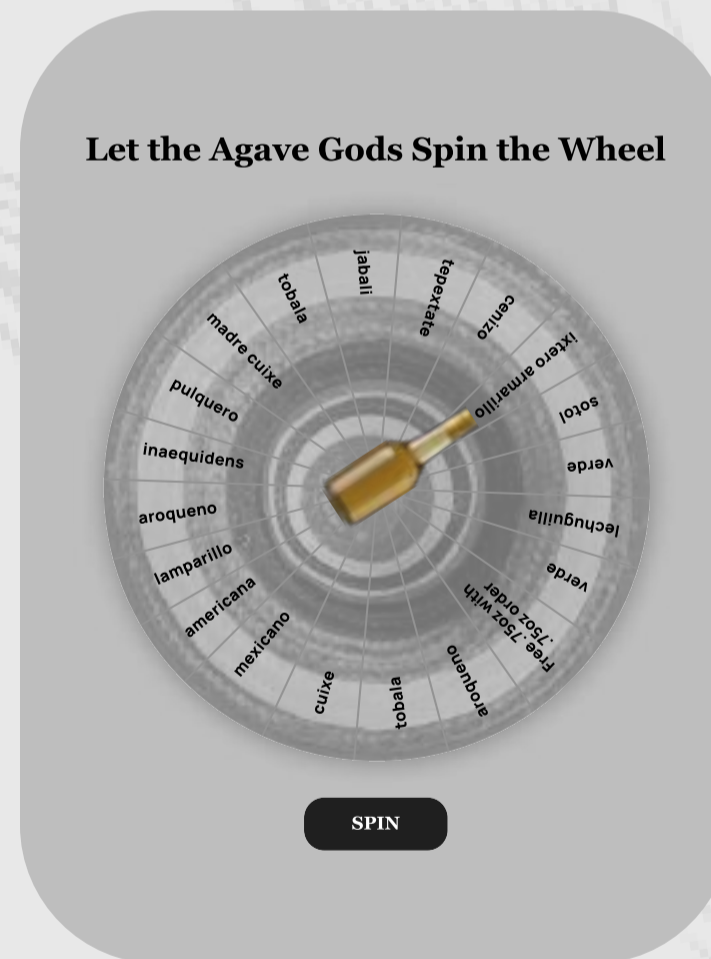

Our client plans to install vending machines selling mezcal (an agave-based drink similar to tequila) in airports, hotels, and restaurants. We, as Mobile App and Web Development Agency, are designing a tablet interface for these vending machines.

The tablet will provide users with an interactive survey where they can select mezcal based on their taste preferences. Users will be able to choose the region where the agave is grown, as well as the specific type of agave used in the mezcal.
