

LUCERIS+AI

Luceris doesn't replace your systems.
It makes them smarter.

Luceris builds AI agents for facilities and real estate teams that deliver instant operational awareness and measurable cost savings.

Our platform identifies critical work orders, provides actionable insights, flags budget waste, and automates corrections — all without disrupting existing systems.

Implement in weeks.
Positive ROI in
about 6 months.

Monthly investment is often
less than one emergency
HVAC service call.

Estimated 5% facilities
budget savings at
under 1% cost.

Your CMMS isn't broken.
It just can't see what Luceris sees.

Facilities and real estate teams are drowning in operational data: thousands of incoming work orders, scattered vendor quotes, and fragmented asset histories.

But despite all this information, it's nearly impossible to answer the most pressing questions:

- What's urgent?
- What's being overlooked?
- Where is money quietly leaking out of the system?

Without clear visibility, decisions are delayed, risks are missed, and performance suffers.

Luceris unlocks the potential of your existing systems.

Our modular AI agents connect the dots—delivering targeted insights, flagging hidden risks, benchmarking performance, and taking action when it matters most.

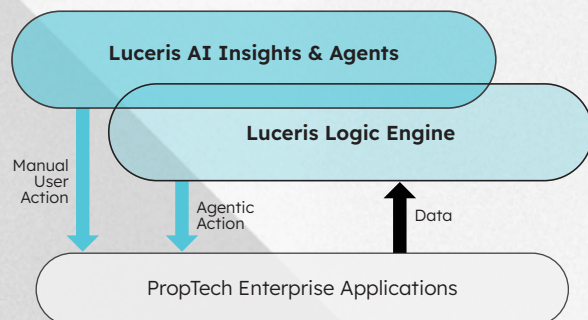

Within weeks, your team gains the clarity to prioritize, the foresight to prevent issues, and the automation to operate more effectively at scale.

Optimize Easily

Luceris equips your team with the intelligence and automation to optimize every corner of operations.

Luceris acts as a layer on top of your existing enterprise stack.

Ready to See Luceris AI in Action?

Let's talk. We'll show you how our AI agents can make your operations smarter, faster, and more cost-effective, without disruption.
