Dura Tag

A how-to guide for tagging chains and lifting equipment

Where to apply

This incredibly robust tag can be used for chains and lifting equipment—attaching it with a swaged cable, or on large, flat, hard-to-tag surfaces like next an anchor.

How to apply

- If using on chain or other lifting slings, pass a swaged cable through the hole in the tag as well as ID plates if required, and clamp the cable connector to close the swaged cable
- If using on a large, flat surface, secure the tag with a 4mm screw through the hole
- Custom self-adhesive Dura Tags can be supplied on request

✓ **Cables**

✓ **Lifting slings**

✗ **Lightweight gear**

Do

- Make sure the swaged cable connector is clamped securely
- Use a screw to attach the tag to large, flat, hard-to-tag areas
- Attach alongside existing ID tags

Don't

- Use on lightweight equipment and webbing
- Over-tighten the screw if attaching with a screw

This tag works well on equipment like:

Lifting slings, chain hoists, installed anchors
