THE SIDE SLIDING GARAGE DOOR.

A side-sliding garage door (also called a horizontal sliding) offers several advantages compared to traditional overhead or roll-up garage doors. Here are some benefits:

1. Space-Saving for Ceiling Area

- Unlike overhead doors, side-sliding doors don't require tracks or mechanisms on the ceiling. This leaves the ceiling free for storage or lighting fixtures.
- Low headroom requirement – as low as 52mm lintel space needed.

2. Partial Opening

- Side-sliding doors allow for partial opening, making it convenient for pedestrian access without fully opening the garage.

3. Aesthetic Appeal

- Side-sliding doors have a sleek and unique appearance, which can enhance the overall look of your property.
- They are available in various materials and styles to suit different architectural designs.

4. Durability

- Many side-sliding doors are constructed from durable materials like aluminum, steel, or wood, and their horizontal operation reduces wear and tear on moving parts.
- Side sliding doors are a low maintenance option as there are no springs to need tensioning.

5. Quiet Operation

- These doors generally produce less noise compared to roll-up doors or overhead doors with heavy motors

— VERTICO SIDE SLIDING DOOR.

The Vertico Side Sliding Door.

The Vertico is an around the corner sliding door, and is the most compact sliding door Glideaway offer.

Minimum headroom clearance of 52mm is all that is needed for this door to operate.

The 100mm wide aluminium slats make it able to turn 90 degrees with only 130mm side room needed.

The Vertico comes standard with an automatic opener which has 2 programmable opening widths (door and gate effect).

Perimeter seal, and bottom track which can be set into the concrete, or fixed on top.

This door is made up of double walled aluminium slats which mean it is quite, and sturdy.

Powdercoating finish on the slats mean it can be coated to match in with joinery etc.

— GLIDEAWAY RTC SIDE SLIDING DOOR.

The Glideaway RTC Side Sliding Door.

The Glideaway 'RTC' (Round the corner) side sliding door is the most customisable sliding door Glideaway manufacture.

This is available in NZ Colorsteel, or custom clad to fit in to your home exterior.

Minimum headroom clearance of 125 mm is all that is needed for this door to operate. Making it a great option for those low headroom setups.

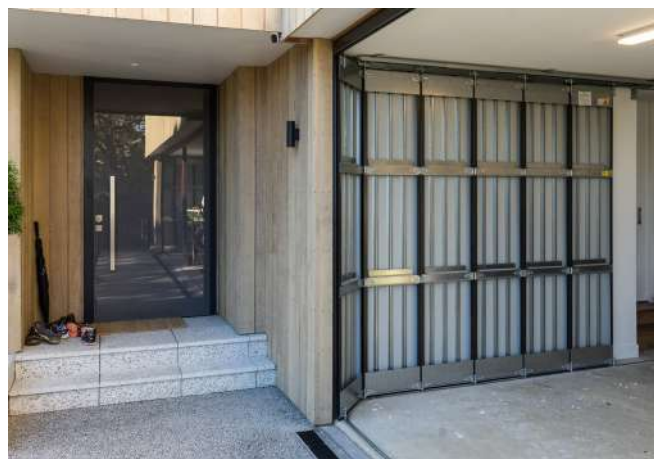

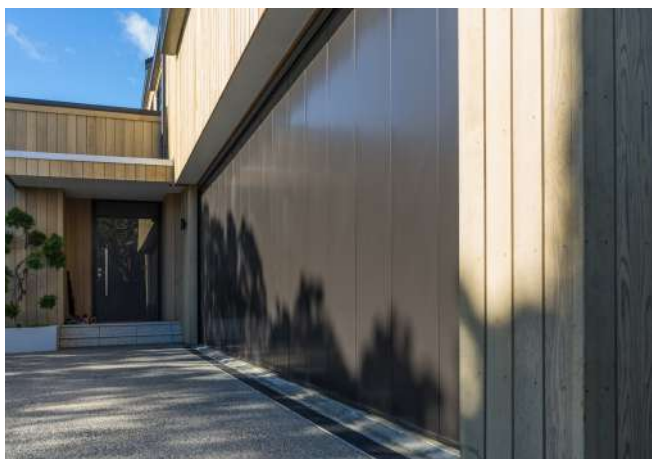

The Glideaway RTC door is top rolling and bottom guided. Twin rollers guide the panels from above, allowing for a smooth operation.

Perimeter seals come standard with this door.

This product can be insulated, and also have windows built into it making it great option for those wanting to add a personal touch to their door.
