MISSOURI
TRAFFIC CRASHES

2024 Statistics

Department of Public Safety
Missouri State Highway Patrol

Introduction

This booklet is published by the Missouri State Highway Patrol as an aid to persons who are interested in the traffic crash problem in Missouri. It contains information which provides for a comprehensive look at the Statewide crash problems as experienced in 2024.

The Missouri State Highway Patrol is the central traffic crash data collection agency for the State of Missouri. Data on both rural and urban traffic crashes is made available to this agency. Law enforcement agencies throughout the State provide the Highway Patrol with copies of their crash reports. All reports of traffic crashes including those investigated by the Missouri State Highway Patrol are tabulated and analyzed by this agency. It is thus due, in part, to the continued cooperation of these law enforcement agencies that a meaningful picture of the statewide crash experience is available to interested persons.

Interesting Statistics

Here at a glance are some interesting statistics found in this booklet:

- In 2024, there were 955 persons killed in traffic crashes in the State of Missouri, 36 (4%) less than 2023. There was a decrease of about 2% in total crashes statewide compared to 2023.
- Speeding and Improper Lane Usage/Change were the two highest Probable Contributing Circumstances in fatal crashes. Of all fatal crashes, 33.4% involved speed and 23.2% involved improper lane usage/change.
- Of all persons killed in Missouri traffic crashes in 2024, 329 (34.5%) were in the 15-35 age group. The age group most overrepresented in Missouri fatal traffic crashes is 25-34 group (159 killed, 16.7% of the total)
- It is interesting to note that in known cases only 13.8% of all traffic crashes occurred during inclement weather (rain, snow, sleet/hail, freezing temp, fog or mist, blowing snow, severe crosswind).
- Of all traffic crashes reported statewide, 73.9% were property damage only.
- Of all traffic crashes, 71.9% occurred during the daylight hours and 80.2% occurred on dry pavement.
- Of all fatal Missouri traffic crashes, 53.2% involved only one vehicle.
- Jackson County recorded the most traffic fatalities with 123.

It is hoped that the information in this booklet will be of value to you. Certainly it is the most comprehensive look available at the crash problem in Missouri.

Drinking and Crashes (includes drivers of all vehicles and pedestrians) - Whether or not a person has been drinking cannot always be determined at the scene of a crash. It is generally impossible to determine the persons who have had one or a few drinks; yet, these individuals may be as much of a hazard as the obvious drunk. Because of the time lapse from the moment of occurrence until an officer arrives at the scene to make the investigation, a person's condition concerning drinking can change a great deal. In cases where the individual may have been removed to a hospital, doctor's office or funeral home, their condition may never be determined.
