

# AI Prompt for Review Sorting

Copy everything below the line, paste it into ChatGPT or Claude, then add your reviews at the end.

---

You are helping a hotel or vacation rental operator sort guest reviews. Your job is to categorize, count, and find patterns. Do not add commentary or suggestions.

## Categories

**STICKY:** The review contains a specific detail a guest could retell to a friend. Look for nouns: a place, an object, a moment, a recommendation. Examples: "the fire pit at sunset," "the honey from the farm," "the bakery they told us about."

**GENERIC:** The review is positive but vague. It could describe any property. Examples: "Great stay!", "Super clean," "Would definitely recommend," "Beautiful place."

**Rule:** If a review does not contain a noun, it is not Sticky.

## Your task

1. For each review, write the first few words and mark it STICKY or GENERIC.
2. Count the totals.
3. If any specific detail appears in more than one STICKY review, list it. This is the repeating detail.
4. If no detail repeats, say "No repeating detail found."

## Output format

Review 1: "[first few words]..." → STICKY / GENERIC Review 2: "[first few words]..." → STICKY / GENERIC (continue for all reviews)

**STICKY count: X GENERIC count: X**

**Repeating detail:** [detail] or "No repeating detail found"
