AM Pedestal System

Our full-featured Acousto-Magnetic ACE system is focused on strong detection of adhesive labels, reliability, and flexibility. It was designed to operate as one or several pedestals solution.

The new **AM ACE** system is suitable for any environment, with a performance that ranks at the top of the retail security market.

The **AM ACE PROFI** supports remote connectivity and data collection and can also be connected to our **STOREMONITOR** cloud platform for advanced system analytics and store performance reports.

To minimize shrinkage even further while still taking advantage of AM technology, we have developed our own platform of RFID antennas that can be seamlessly integrated inside ACE PROFI pedestals. This solution provides retailers a soft transition from traditional EAS systems to article surveillance with additional RFID protection and inventory management. In addition to all these options and features, the system is equipped with our new smart **ECO MODE**  that saves up to 35% of the EAS energy consumption. This way we help to reduce our customer's unnecessary utility costs, increase lifespan of the system and stay environmentally friendly.

Features & options

- Remote maintenance and diagnostics 
- RFID
- MetalMagnet detection
- Visitor counting
- Advertisement panel
- Smart directional alarms
- Jammer detector
- Tag too close indication
- **ECO MODE** 

Remote connectivity and data collection are standard features of our systems, ensuring easy installation, remote servicing, and maintenance with quick response and no unnecessary travel costs.

Retailers can enhance their AM ACE systems against professional shoplifters using foil-lined bags by adding the license-based **Metal and Magnet Detection** feature for extra security.

The **advertisement** panel on the security system serves as an additional sales tool with "easy slide" banner replacement. The Profi X pedestal, identical in design but with a transparent acrylic surface instead of an opaque panel, seamlessly blends into its surroundings.

When connected to our **STOREMONITOR** cloud analytics, all key data from visitor counters, alarm management, and system operation are available for further processing. Users can analyze performance through advanced graphs and reports automatically sent by email or integrated into existing systems.
