## + Vitamin D3

Vitamin D3 – one of twenty-four essential micronutrients for the human body – is a fat-soluble vitamin. Vitamin D3 is typically produced in the skin after exposure to sunlight; however, it is found naturally in fish and eggs.

Formulations ranging from bone health to immune function to mood support contain Vitamin D3.

### Powerful Benefits of Vitamin D3

- Supports Healthy Bone Growth
- Provides Immune Support
- Promotes Healthy Energy
- Supports Healthy Mood Balance

## Synergy between D3 and K2

### Calcium Regulation

Vitamin D3 enhances calcium absorption from the gut, and Vitamin K2 ensures that the calcium is properly utilized and deposited in bones and teeth rather than accumulating in the arteries or soft tissues.

### Enhanced Bone Health

Together, they contribute to better bone density and strength.

### Reduced Risk of Cardiovascular Issues

By ensuring calcium is directed to the right places, they can help reduce the risk of cardiovascular diseases associated with calcium buildup in arteries.

Our mission is to revolutionize the nutraceutical industry through relentless innovation and forward-thinking solutions.

Our dedication to excellence and sustainability empowers our partners to achieve unparalleled success, transforming the future of health.
