

## ATOM™ MULTIASCEND STRAP

The ATOM MultiAscend Strap provides the ideal method for affixing the **Harken Ninja™ MultiAscend** to the **CMC ATOM Harness**. This strap is specifically designed to hold the MultiAscend in position for smooth and efficient use as a chest ascender. It is 15 inches long (4 inches longer than the standard **ATOM Ascender Strap**) which allows the loop to be doubled up around the front lift for added security and cleaner integration. Stiffened plastic components inside the strap assist with installation. This is a different strap from the one that is included with MultiAscend. It is made for better integration with the ATOM Harness.

The ATOM MultiAscend Strap is compatible with all full body ATOM Harnesses including the ATOM Sit – ATOM Chest combination. To order your ATOM Harness with the MultiAscend pre-installed, check out our custom **Build Your Own ATOM models**. Watch the video on this page for instructions on how to install the MultiAscend on the ATOM Harness using the ATOM MultiAscend Strap. Once integrated, these components provide outstanding comfort and mobility when working on rope.

**\*\* ATOM MULTIASCEND STRAP DOES NOT INCLUDE THE HARKEN NINJA MULTIASCEND\*\***
