LED High Visibility Vest PRO

HIVI Nordic (High Visibility Nordic) has developed an LED high visibility vest for professionals working in exposed environments. A vest that provides active visibility in the dark and also works as work lighting.

> ***"We don't sell reflective material, we sell early detection"***

New: front and back separately

One button each for front and back, clearly marked. Light only the back, only the front, or both when you need to be seen from every direction.

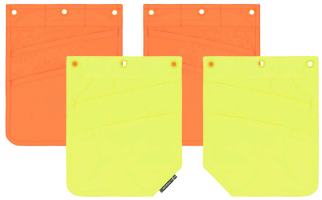

How the LED vest works

1. Connect a power bank or mobile phone with USB-C to the charging cable in the inner pocket.
2. Press and hold for three seconds to switch the LED strips on or off.
3. Each press adjusts the brightness across three levels: low (green), medium (blue), high (red).

Battery life: Low 23 h, Medium 15–16 h, High 10 h.

Colours and accessories

The vest is available in yellow and orange.

Tool Pocket: tool pockets that attach to the lower part of the vest. Sold separately in pairs, in yellow or orange.

Power bank 10,000 mAh with USB-C sold separately.

Certifications

EN ISO 20471:2013/A1:2016 – High visibility, class 2
CE marked in accordance with EU Regulation (EU) 2016/425
OEKO-TEX® STANDARD 100

Machine washable at 40 °C in the included laundry bag (without battery/power bank).

One product instead of several

An LED high visibility vest creates its own visibility, all the time, independent of external light sources.

The vest combines a high visibility garment, active visibility and work lighting in one. It reduces the need for headlamps, flashlights or portable work lights.

We send a free pilot vest to your workplace. Try it for 14 days in your own environment.

Scan and we'll contact you
