

FOR IMMEDIATE RELEASE

Jericho Security and Simulint Announce Strategic Partnership to Elevate Cyber Resilience for SMBs

AI-Informed Phishing Defense Meets Unified Cybersecurity Platform to Deliver Next-Generation Protection

2026-03-05 Jericho Security, a leader in AI-informed phishing simulation and cybersecurity awareness training, today announced a strategic partnership with Simulint, creator of BlueSphere™, a comprehensive cybersecurity and technology platform purpose-built for small and mid-sized businesses (SMBs).

The partnership integrates Jericho's advanced phishing simulation and behavioral training capabilities directly into the BlueSphere™ ecosystem, creating a unified approach to cybersecurity that protects not only systems and infrastructure, but people.

A New Standard for SMB Cyber Defense

Modern cyberattacks increasingly target human behavior as much as technical vulnerabilities. Phishing, credential harvesting, and social engineering remain among the most effective attack vectors facing SMBs today.

By combining Jericho Security's AI-driven phishing simulations with BlueSphere™'s integrated monitoring, cloud configuration review, vulnerability scanning, dark web exposure analysis, and managed detection capabilities, the partnership delivers a multi-layered defense model designed specifically for growing organizations.

"Technology alone cannot solve today's cyber risk," said Sage Wohns, CEO of Jericho Security. "True resilience requires understanding human behavior as deeply as system telemetry. By partnering with Simulint, we are embedding intelligent, AI-informed training into BlueSphere™'s comprehensive security ecosystem, bringing enterprise-grade human defense to the SMB market."

From Exposure to Resilience

BlueSphere™ was designed to unify cybersecurity across four critical domains:

- Data
- Identities
- Applications
- Devices

With Jericho Security integrated into the platform, organizations gain:

- AI-informed phishing simulations tailored to real-world threat patterns
- Measurable employee risk scoring
- Behavioral analytics to identify susceptibility trends
- Continuous reinforcement training
- Integrated reporting alongside technical risk indicators

“SMBs deserve enterprise-grade security clarity,” said Marc Lotti, CEO at Simulint. “This partnership ensures that when we surface risk across cloud systems, endpoints, or exposed credentials, we are equally addressing the human dimension. Jericho brings intelligence and precision to the most targeted attack surface: people.”

Designed for the Modern SMB

The combined offering is delivered through BlueSphere™’s structured engagement model, including BlueSphere Pulse™, a seven-day executive snapshot that identifies exposure across key cybersecurity domains. Jericho’s phishing and training capabilities now form a core component of that human-risk visibility.

Together, Jericho Security and Simulint are advancing a more holistic security model — one that aligns awareness, monitoring, configuration, and detection into a unified strategy accessible to organizations that historically lacked enterprise-level protection.

About Jericho Security

Jericho Security provides AI-informed phishing simulation and cybersecurity training solutions that help organizations strengthen human defenses against evolving threats. By leveraging artificial intelligence and behavioral analytics, Jericho enables measurable, adaptive risk reduction at scale.

About Simulint

Simulint is a cybersecurity and technology firm dedicated to empowering small and mid-sized businesses through integrated, modern protection strategies. Its BlueSphere™ platform delivers unified visibility across data, identities, applications, and devices, enabling organizations to compete securely in a digital-first world.
