

FOR IMMEDIATE RELEASE

Simulint and Atriade Announce Strategic Partnership to Deliver Comprehensive Cyber and Physical Resiliency Solutions

Clients can engage each firm independently or leverage a unified, best-in-class offering that combines cyber and physical penetration testing into a single, differentiated resiliency framework

Dover, DE – June 22, 2026 – Simulint, a leader in next-generation cybersecurity, technology, and operational resilience solutions, today announced a strategic partnership with Atriade, a globally recognized physical security consulting firm, to deliver a uniquely comprehensive approach to identifying and mitigating organizational vulnerabilities.

At the core of the partnership is a simple but powerful premise: while cyber and physical security have traditionally been addressed separately, real-world threats do not operate within those boundaries.

Independent Excellence. Combined Differentiation.

Simulint and Atriade will continue to offer their respective services independently:

- Simulint: Advanced cyber penetration testing, threat detection, and operational resilience through its BlueSphere platform
- Atriade: Industry-leading physical security assessments, program design, and physical penetration testing

However, for organizations seeking a more complete understanding of risk, the firms now offer a coordinated engagement model that integrates both domains into a single, cohesive resiliency strategy. This flexibility ensures clients can:

- Procure cyber or physical services independently, based on immediate needs
- Engage both firms in a unified program for a comprehensive view of vulnerabilities
- Scale seamlessly from targeted assessments to full-spectrum resiliency initiatives

A More Realistic View of Risk

“Security gaps don’t exist in isolation, they exist at the intersection of systems, facilities, and human behavior. Organizations have historically been forced to stitch together cyber and physical insights on their own. This partnership eliminates that fragmentation while still preserving the ability to engage either capability independently.”, said Alex Levine, Simulint’s COO.

When combined, Simulint and Atriade deliver a holistic, adversary-aligned testing model that mirrors how modern attackers actually operate, moving fluidly between digital and physical vectors.

Comprehensive Resiliency Through Converged Testing

The integrated offering includes:

- Cyber penetration testing across infrastructure, applications, and cloud environments
- Physical penetration testing across facilities, access controls, and operational workflows
- Coordinated attack simulations spanning people, process, and technology
- Unified reporting that maps vulnerabilities across both domains
- Prioritized remediation strategies aligned to business risk and operational impact

“Atriade has always focused on designing security programs that reflect real-world risk. By aligning with Simulint’s cyber expertise, we can now offer clients a seamless path to understanding and addressing vulnerabilities across their entire environment without forcing them into a one-size-fits-all model.”, said Mohammed Atif Shehzad, Atriade’s Managing Director.

What Sets This Partnership Apart

While many providers specialize in either cyber or physical security, few offer both, and even fewer do so in a way that allows clients to choose either independently or combine them into a unified engagement.

This dual approach delivers:

- Best-in-class depth in each discipline
- Flexibility in procurement and engagement
- A differentiated, comprehensive resiliency model when combined

The result is a solution that meets organizations where they are today while enabling a clear path toward full-spectrum resilience.

Availability

The joint Simulint–Atriade resiliency offerings are available immediately, with both standalone and integrated engagement models.
