

Conservatory Roof Insulation

Your conservatory made more comfortable

ambivo

Too cold in winter? Too hot in summer?

Let us fix that. Prices start from £2,499.
Don't put up with a conservatory you can't use.

Before

After

The problem: Great in theory, awful in practice.

Let's be honest. Conservatories are beautiful – in spring, but the minute the sun hits? It's a green house. In winter? You might as well store your frozen food shop out there. Sound familiar? You're not alone as thousands of UK homeowners face the same issue. It's an expensive room they can't use most of the year. Conservatories really are a flawed concept.

That's where we come in.
We can help turn your
conservatory into a comfortable
and useful room all year round.

Ambivo transforms your too-hot, too-cold conservatory into a **cosy, comfortable living space** – for work, play, dinner parties, or just some well-earned peace and quiet.

All about Ambivo

We're Ambivo – a bold, fresh-faced brand on a mission to take the sting out of conservatories. We saw that insulation was either overpriced and/or poor quality. So we did things differently:

- We install a unique UK best-rated conservatory insulation system
- We built a team of clean, courteous, highly trained installers
- We made pricing simple, and service straightforward

No middlemen. No call centre headaches. Just honest, helpful people who want your conservatory to work as hard as you do.

Ambivo installations are backed by comprehensive guarantees and carried out by trained specialists using the market-leading ConservaHeat insulation system.

As a proven government energy saving measure it attracts no VAT

Professional finishing

Expertly fitted in just one day with no mess, minimal disruption, and a 10-year insurance-backed guarantee.

Aftercare advice

Once everything is complete, we'll walk you through the results and make sure you're 100% happy.

If you do need us for anything after the installation, just call us and we'll be on hand to assist you!

The Installation Process

Precision Timber Battening

The foundation of the system is a primary 22mm timber batten framework fixed directly to your existing aluminium glazing bars.

Thermal Breathing
Structural Integrity

The ConservaHeat Multifoil Layer Secondary Supporting Framework

We install our exclusive, trademarked ConservaHeat® insulation quilt and a secondary timber batten over the insulation to “sandwich” the system in place.

Internal Finish & Professional Electricians

The final layer is our maintenance-free, PVC-u tongue and groove finishing board.

Lightweight Design
Integrated Lighting

Regulates temperature

Warm in winter, cool in summer.

Improves energy efficiency

Conservatory roof insulation offers unrivalled thermal performance, boosting your energy efficiency.

Reduces noise from rain

Polycarbonate roofs have virtually zero noise reduction and can even amplify rain noise. Our conservatory roof insulation will give you peace and quiet 365 days a year.

Fast, mess-free installation

Our insulation is installed to your existing conservatory roof as a fully sealed system by professional conservatory insulation specialists.

No planning permission needed

There is no need to structurally alter your conservatory, so no requirement for planning permission.

Retains natural light

Your conservatory will still have plenty of light coming in via the windows - just like any other room with multiple windows and a solid roof.

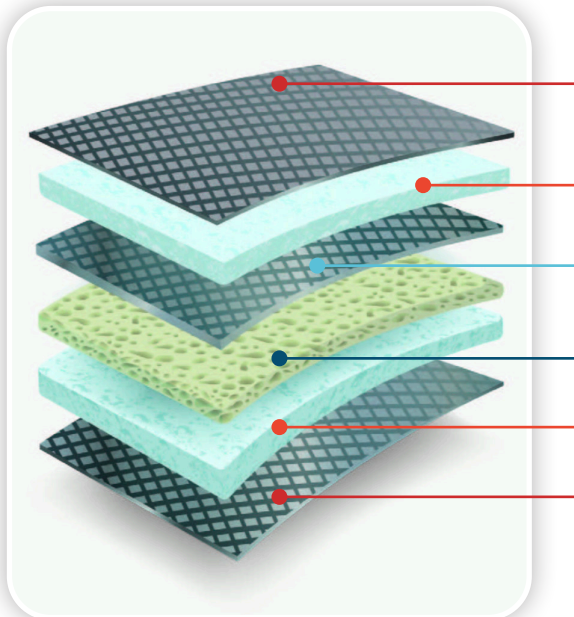

It doesn't look like insulation.

It looks like a professionally finished roof – because that's what it becomes.

ConservaHeat is a **high-performance, multi-layer insulation system** designed specifically for conservatory roofs. It reflects heat back into the room in winter and deflects heat away in summer.

Key benefits:

1. True Aluminium Foil

Ultra low emissivity results in over 95% of radiant heat being reflected from direct sunlight.

2. Thermowadding Membrane

Creates air pockets to prevent heat gain by conduction of radiant energy.

3. Metalised Poly Foil Barrier

Secondary radiant barrier to again prevent both heat gain in summer & heat loss in winter.

4. Vapour Control Foam Membrane

Total vapour control layer to prevent damp & condensation.

5. Thermowadding Membrane

Creates air pockets to prevent heat loss by conduction of radiant energy.

6. True Aluminium Foil

Reduces heat loss by up to 90%, by using ultra-low emissivity foil to retain much needed heat in winter.

Our insulation quilt is exclusive to us and is the **ONLY** insulation product specifically developed in the UK for conservatory roofs.

Our Insulation uses technology researched and developed by NASA on the Apollo Space Shuttle.

Here are what are customers say

Quotes taken from our Trustpilot page which you can view full length reviews by searching Ambivo on Trustpilot

"In no time at all, the fitters arrived and did an excellent job at fitting and clearing up after themselves. There was a good after sales service as well. Chris came round to inspect the finished product and make sure I was happy with it. What a difference! Cool in the summer it was, and warm in the winter it's been also. And it's aesthetically pleasing to look at as an important extra bonus!"

"Chris and his team have given us a lovely, usable space. The insulated conservatory roof looks very smart. The two young men that fitted it were very hard working, polite and tidy. The price was very good in comparison to some of the quotes that we had. We're really pleased that we came across this company."

"Chris was the only one to inform me of two options of having the roof insulated. I was mega impressed as this really suited my budget. The roof of the conservatory looks lovely. It makes all the difference and I have to admit I am so happy that I contacted Ambivo. Best thing I ever did"
