What to expect this holiday season

1 August 2024

# 2024 Holiday Guide Overview

As we enter the second half of 2024, it's time to find the changes that will fuel growth this holiday season. The Insights & Connections team in collaboration with our Experience & Activation and Business Consulting friends have prepared this Holiday Preview Guide for you.

No matter what holiday is celebrated around the world (Ramadan, Christmas, Diwali) all consumers are making their wish list earlier! It's important to have a full funnel strategy to maximize revenue potential. And remember, it's not just price but a more expansive view of value that drives purchase intent.

**\What you should do:** Read it from cover to cover, of course! But, most importantly, use content to incite meaningful conversations with clients.

Happy Reading!

A man with short dark hair, wearing a dark leather jacket and a thick grey scarf, is looking down at a smartphone in his hands. He is holding two shopping bags, one brown and one blue. The background is a blurred city street at night with warm bokeh lights from buildings and street lamps. The overall mood is festive and modern.

# US Channel Observations from Holiday 2023

*From a sampling of ASM's activation experts*

## Social:

### Grabbed Efficient Year-End Demand

As promo fatigue set in, brands pulled back during the peak C5 weekend.

In December, social investments increased to leverage improved ROAS and conversion rates before shipping deadlines and the time from Christmas to New Year's. Luxury and beauty particularly thrived with this approach.

## Affiliate & Marketplaces:

### Capitalized on Value-Seeking Mindset

Sales were subdued until C5 with Cyber Monday leading the way. In Affiliate, Luxury brand performance increased when using promotions. In marketplaces, Electronics had the largest discount sales. Brands not offering standard incentives like free shipping saw declines. Alternative payment methods and loyalty incentives, alongside clearance sales, drove notable growth.

## Display:

### Seized Most Likely Spike Periods

The big winners were brands that seized the opportunity earlier, with a close second to those that were agile enough to retrench at the end of the year. While spend was less robust, eCPA remained steady YoY and ROAS trended up as dollars flowed to key efficient spike periods – C5, pre-shipping cut off and Christmas Day.

## Our POV

While many consumer waited until C5 sales event to get the best deals, brands don't have to! Get on their wish list early by offering consistent value (free shipping, personalized offers, guarantees, loyalty rewards, etc.) as shoppers research products on their terms. This will boost both ROAS & conversion rates by incentivizing beyond traditional sales events.

# Specialized Stores Are Seeing The Strongest Growth As Holiday 2024 Approaches

Retail Sales Growth % Q2 vs. Q2. 2023

Source: BLS.gov. Nominal growth – does not account for inflation

## \ Hobbies Fueling Growth

Specialized stores expand into DTC to accommodate consumers passions (books, pets, art, etc.)

## \ Construction's Snowball Effect

Leads to negative growth of home and furniture store sales as well as home improvement

# Looking Forward, Holiday Sales Growth Will Be Similar to 2023

## 1/3 of Holiday Shoppers Will Start in October

Expect deep discounts well before Halloween and marketers to campaign earlier since there are only 27 days between Thanksgiving and Christmas

## Black Friday becomes Cyber Friday

Project \$14B in ecommerce sales. Hammock effect will continue as consumers taking a break from spending just before Thanksgiving.

## Physical Stores Used for Social Shopping

Modest growth as brick and mortar transform into a destination for product demonstrations and dialogue with in-store experts

# Organic search tactics to create more valuable holiday experiences

Use organic's technical and content pillars to enter your brand into consumers' decision-making process.

## ORGANIC SEARCH TACTICS CHECKLIST

Let organic help provide great page experience across channels:

Prioritize improvements on pages with poor Core Web Vitals scores (an organic ranking factor). Unresolved, they are likely to make potential customers from any channel unhappy... and less likely to convert.

Feed the Google machine with schema:

Review Product, VideoObject, ImageObject, LocalBusiness, and other types of schema markup to ensure it is valid and uses all possible attributes. Google alters its listings often to use this info.

Refresh and update existing content:

Update last year's core holiday pages with fresh content instead of publishing new holiday URLs, if possible. Ensure they're linked well internally. Research linguistic and product trends to identify emerging opportunities.

Review ecomm category and product pages for chances to target mid- and deep-funnel queries. Do you... Provide a unique selling proposition? Answer questions about selecting a product? Provide user reviews or other social proof that your products are the right ones to buy?

Ensure any brick-and-mortar location on Google & Apple Business profiles have updated holiday hours.

Considering use of AI?

Retain an editorial layer on any AI-generated content to ensure accuracy and compliance with brand tone and voice.
