

Insurance Discovery FC

With Office Ally, Finding Coverage for Your Patients Has Never Been Easier

Benefits of Insurance Discovery FC

1. Increase financial performance by finding previously unknown patient coverage and increasing insurance revenue.
2. Get paid faster by effectively billing insurance instead of trying to collect from patients after they leave.
3. Improve access to care and increase patient satisfaction for patients who would otherwise be billed for all the services they received.

Identify and Confirm Coverage

Built with practices like yours in mind, Insurance Discovery FC enables providers to find active patient insurance coverage that was previously unknown or unidentified. If a patient's coverage is unknown or if an eligibility and benefits inquiry does not provide the necessary coverage info, you can immediately turn to Insurance Discovery FC to search for coverage, even if the patient doesn't have their insurance card or can't remember their insurance information. This reduces the time and effort needed to pursue full payments from patients for already-provided care, improving overall satisfaction.

Boost Financial Performance

Insurance Discovery FC can help you find coverage for patients who may be self-pay or have unknown coverage. This allows you to collect for services rendered and effectively bill insurance at the time of service rather than try to collect from patients after they leave, thus improving overall financial performance.

Streamline Processes

With Insurance Discovery FC, providers can improve patient insurance eligibility workflows, saving time, money and hassle by reducing manual efforts and administrative overhead. By allowing providers to quickly look up a patient's coverage with just a few details—like social security number, zip code and/or birthday—Insurance Discovery FC prevents interruptions in providing care and receiving payments.

Improve Patient Experiences

Insurance Discovery FC allows more patients to receive quality care by finding previously unknown or unidentified insurance coverage to help make care possible and affordable. Plus, quicker insurance identification alleviates patient stress by eliminating the need to remember and communicate confusing insurance coverage information, leading to improved patient satisfaction.
