

TEAR-DROP HANGERS

The tear-drop hanger is a single-point suspension solution, providing stability and ease of installation with just one connection point. Its unique tear-drop shape simplifies the process of hanging a variety of ductwork. To install, combine the hanger with a threaded rod or other suitable fastener to secure it to the ceiling. Simply screw the threaded rod into the threaded hole on top of the hanger. The hanging height can be adjusted even after the ductwork is in place, allowing for precise positioning and alignment.
