SecureTrust™
BY VIKINGCLOUD®

For small and medium-sized businesses that accept payment cards.

PCI DSS Compliance Made Easy

SecureTrust™ by VikingCloud simplifies PCI DSS compliance for small and medium-sized businesses that accept payment cards.

With integrated cybersecurity tools and a guided online experience tailored to your unique business profile, SecureTrust helps you meet the mandatory Payment Card Industry Data Security Standard (PCI DSS) requirements and protect your business from cyber threats.

You only answer what you need to answer – speeding up your certification process and ensuring you complete the right PCI DSS Self-Assessment Questionnaire (SAQ), set up vulnerability scanning (if applicable), and take additional steps to defend your business against cybercriminals and malware using our integrated security tools.

Getting Started

1. Log In or Register

If your payment service provider (acquiring bank or payment processor) has enrolled you in SecureTrust by VikingCloud, check your email for welcome instructions.

Visit https://managepci.com to log in or register a new account.

2. Prepare Your Information

Have the following ready:

- Merchant ID number.
- Company name.
- Payment system details (device/software make & model, connection type: dial-up phone line, Wi-Fi, or wired internet).
- Third-party setup information—if you received help setting up, configuring, or managing your payment processing equipment, you may need to know how that equipment was set up.
- E-commerce payment form setup (if applicable).

TIP: When prompted, ensure the contact details for the person responsible for compliance reporting are up to date.
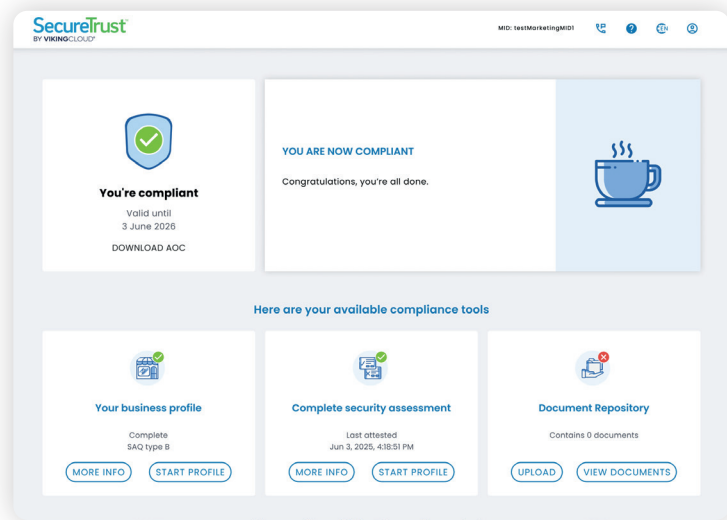

PCI Manager Key Features

Feature	Description
✔ Guided Compliance	Personalized, step-by-step guidance through the PCI DSS Self-Assessment Questionnaire (SAQ).
✔ Dynamic Portal	Tailors the experience based on your business profile.

✔ Security Awareness Training	Educate your team and meet PCI DSS training requirements.
✔ Assurance Card Website Seal	Display your compliance status to customers.
✔ Unlimited External Vulnerability Scans	PCI DSS-certified scanning with unlimited rescans every 90 days.

SecureTrust BY VIKINGCLOUD®

What You'll Complete

PCI DSS Self-Assessment Questionnaire (SAQ):

A tailored questionnaire based on your business type to validate compliance.

External Vulnerability Scanning (ASV):

If you have an e-commerce website or an internet connection that connects to business systems that store, process, or transmit payment card data, external vulnerability scanning may be required. Your SecureTrust by VikingCloud's dynamic portal will determine your scanning requirements based on your unique business profile. If your business requires external vulnerability scanning:

- Your online portal will guide you through the entire process of setting up your scans. It is important to scan the right location and/or website.

- You will receive notifications through every step of the scanning process, including alerts to log in and review your scan results when they are complete.

- Every 90 days, you must have a passing and attested scan within the portal to maintain your PCI DSS compliance.

Cybersecurity Tools Activation:

We recommend installing the required software on your computer(s) at the location(s) where you handle payment cards. Access tools directly from your dashboard to enhance protection:

- ✔ External Network Vulnerability Scan.
- ✔ Security Awareness Training.
- ✔ Assurance Card Website Seal.
- ✔ Cardholder Data Scan.
- ✔ Network Discovery Scan.
- ✔ Device Security Scan.
