

SAFETY ALERT

Safety at crossings & intersections

Name:

Date Read:

WHAT HAPPENED?

A side-by-side vehicle being driven by a farm worker collided head-on with a ute being driven by a member of the public, when turning out of a gateway onto a road crossing. It was in an 80 km/h speed zone. The ute driver managed to brake before impact, which reduced the impact of the collision.

Both vehicles were significantly damaged, and the side-by-side vehicle was a total loss. The side-by-side operator suffered bruising from the seatbelt.

Sunstrike may have been a contributing factor, as well as overgrown vegetation on banks which may have limited the driver's visibility of oncoming traffic.

KEY LESSONS

- Stay alert, fully stop and carefully look both ways before entering onto or crossing the road, even the ones you drive through every day.
- Vegetation around crossings and intersections needs to be kept trimmed back or removed so there is a clear view of any oncoming traffic.
- Whenever you are operating a vehicle make sure you are wearing a seatbelt and the required PPE - this includes seatbelts, helmets, hi-viz clothing, and sunglasses when needed.
- Make sure anyone using a farm vehicle has completed driver training, and vehicles are in good working and serviced condition.
- Install signage at road crossings to remind drivers to stop and look.
- Limit or remove any distractions that could take your focus away from driving. This includes cellphones, background music, headphones, or performing other tasks.
- Before you start, check that you are up to the task. Are you tired or distracted? Is there anything that will impact your driving? Talk to your team or manager if you are unsure, or have concerns.
