

PhaseWell Research Acquires Chase Medical Research to Expand Clinical Trial Capabilities in Connecticut

The acquisition expands PhaseWell's Northeast footprint and advances its ability to support cardiometabolic and central nervous system (CNS) clinical research within the community.

NASHVILLE, Tenn. — PhaseWell Research (“PhaseWell”), a multisite clinical research company, today announced the strategic acquisition of Chase Medical Research (“CMR”). Under the leadership of founder, key opinion leader, and lead Principal Investigator Dr. Joseph Soufer, CMR operates sites in Waterbury and Hamden, Connecticut. The partnership supports PhaseWell’s mission of connecting communities to clinical trials, bringing hope today and shaping tomorrow’s medicine.

Headquartered in Nashville, Tennessee, PhaseWell Research is focused on increasing participation in clinical trials by offering innovative research opportunities within its trusted, high-performing sites and community practices nationwide. The addition of Chase Medical Research strengthens PhaseWell’s growing Northeast footprint and significantly expands the company’s cardiometabolic capabilities while offering complimentary expansion within its growing central nervous system portfolio.

Chase Medical Research brings expertise in conducting clinical trials across endocrine and metabolic disease, cardiovascular conditions, central nervous system disorders, respiratory and vaccine research, pain and musculoskeletal disorders, gastrointestinal and urologic conditions, and women’s and men’s health. With strong community ties and access to a diverse patient population in Connecticut, CMR has built a reputation for best-in-category patient retention, high-quality data, and patient-centric research operations.

“Chase Medical Research exemplifies the type of community-based research sites we seek to partner with...,” said Carsten Bick, Chief Executive Officer of PhaseWell Research. “...their 20+ years of driving advances within cardiometabolic research as a primary focus stands out within our industry, and their successes with pharma partners and community patients are testament to the strengths we are acquiring in this partnership.”

The partnership further advances PhaseWell’s strategy of building an organization of trusted research sites capable of supporting Phase I through Phase IV clinical trials across complex and high-demand therapeutic areas, including Oncology, Central Nervous System, and Cardiometabolic conditions. Collectively, PhaseWell’s sites have completed more than 2,200 clinical trials and contributed to the development and approval of more than 185 therapies.

“We look forward to this next chapter with PhaseWell. The partnership allows us to grow our sites and extend our reach while staying grounded in the Connecticut communities we serve,” said Dr. Soufer. “We are creating more opportunities to bring innovative clinical trials to patients in Connecticut while taking Chase Medical’s expertise outside our four walls to bring best-in-class cardiometabolic capabilities across PhaseWell’s growing national presence.”
