

Direct Execution. No Small Talk.

The following 20-minute sessions are designed to move your department from firefighting to foresight. We don't do generalist consulting; we provide the human expertise and technology to ensure your strategy scales without breaking.

Automated Supply Chain Risk Assessment

- ✓ **The Problem:** Attackers aren't wasting time on your perimeter; they're just hitching a ride with your trusted vendors. Supply chain attacks have turned your partners into your biggest blind spots. One weak link in their security is a direct path to your data.
- ✓ **The Outcome:** We demonstrate how to move from "point-in-time" vendor audits to continuous visibility. You will see how we actively gauge and monitor cyber risks posed by your vendors and their sub-suppliers in real-time.
- ✓ **Target:** CISOs & CROs (Finance / Healthcare)

Data Science ROI Framework

- ✓ **The Problem:** Most AI transformations fail because they are built on "Data Unreadiness." If your models aren't paying for themselves in reduced churn, fraud, or waste, they shouldn't be in your stack.
- ✓ **The Outcome:** A diagnostic session to map technical metrics directly to Rand-value savings. We provide a Strategic ROI Audit to separate your high-value assets from your operational liabilities.
- ✓ **Target:** CDOs & CFOs

Regulatory Compliance for AI (SA Market)

- ✓ **The Problem:** "Shadow AI" is creating a silent compliance disaster. In the SA market, you need explainable models to satisfy both POPIA and global mandates (EU AI Act).
- ✓ **The Outcome:** We provide a Compliance Readiness Roadmap. We move you from a "black box" risk to a lifecycle approach where every AI decision is transparent, clinically/financially verifiable, and regulator-proof.
- ✓ **Target:** CDOs, CISOs & Legal Counsel

Low-Cost Testing for Revenue-Making Automations

- ✓ **The Problem:** Companies fail because they try to "boil the ocean" with massive transformation budgets that never deliver.
- ✓ **The Outcome:** We show you how to de-risk your digital roadmap. We run 2-week "Smoke Tests" on high-friction workflows to prove ROI before you commit a full budget. You decide which transformations to pursue based on hard data, not vendor promises.
- ✓ **Target:** COOs & CFOs

THE INSODUS DIFFERENCE: Technology is either a multiplier or a liability. We ensure it's the former by embedding strategy and execution into your team.
