Why This Guide Matters

Cybercrime is rising fast, and small businesses are the #1 target.

- 43% of cyberattacks target small businesses.

- 60% of victims close within 6 months of a major breach.

But here's the good news: you can stop most attacks with a few simple steps. This guide shows you how.

1. Lock the Digital Front Door

- Use strong, unique passwords for every account.

- Turn on Multi-Factor Authentication (MFA) wherever possible.

- Remove old accounts from former employees or vendors.

Pro Tip: A password manager like Bitwarden makes this easy.

2. Keep Your Devices Clean

- Update all software & apps regularly-don't ignore updates.

- Install trusted antivirus/EDR protection on every device.

- Remove unused apps and disable old plugins.

3. Protect Your Emails

- 90% of breaches start with phishing.

- Double-check links before you click.

- Train your team to spot fake invoices, urgent requests, or suspicious attachments.

4. Back Up What Matters

- Use automated cloud backups for emails and important files.

- Test your backups every month-make sure you can actually restore.

5. Secure Your Wi-Fi & Office Network

- Change your Wi-Fi router's default password.

- Separate guest Wi-Fi from your main business network.

- Monitor for unknown devices connecting to your network.

6. Plan for the Worst

- Have a simple incident response plan-know what to do if you're hacked.

- Save your IT provider's contact info for emergencies.

- Consider cyber insurance for extra protection.
