This word, like many in the English language, has its roots in Latin. Its oldest Latin ancestor is the word domus, which means "house." Another Latin word that came from this word is the Latin dominus, which means "master or owner of the house." In the 1500s, this word took on a shortened form in Spanish and Portuguese, giving us the title of the Spanish don. Eventually, the word evolved to simply mean "a person of high importance." In the 1600s, students at English universities began to use the term don as a slang term to refer to their professors. Eventually, the name stuck, and it is now quite common, but mostly in British English. Meanwhile, in Italian, the word took on its own meaning: "boss." From there, it made its way into American English in the 1950s to refer to the Mafia boss. The verb form of the word, meaning to put on an article of clothing, came from a different place altogether. It is actually a slang word that is a contraction of two English words: "do" and "on." People would say, "I do on this shirt." Eventually, the phrase was shortened simply to don, and the rest is history. What Are Some Examples of the Word Don in a Sentence?
